Data communications refers to the transmission of this digital data between two or more computers and a computer network or data network is a telecommunications network that allows

computers to exchange data. The physical connection between networked computing devices is established using either cable media or wireless media.

~~**Data Communication & Computer Network**~~
Tutorialspoint

Data Communications and Networking is designed to help students understand the basics of data communications and networking, and the protocols used in the Internet in particular by using the protocol layering of the Internet and TCP/IP protocol

suite. Technologies related to data communication and networking may be the fastest growing in today's culture.

~~**Data Communications and Networking:
Forouzan, Behrouz A ...**~~

Data communications are the exchange of data between two devices via some form of transmission medium such as a wire cable. For data communications to occur, the communicating devices must be part of a communication system made up of a combination of hardware (physical

communication channels to implement proper communication procedures and related networking methodologies whereas data communication is basically a transmission process that includes digital data transfers between two or more computers or similar devices and vice versa.

~~Computer Network vs Data Communication | Top 7 Valuable ...~~

TCP/IP was designed to allow networks running on different protocols to have an intermediary protocol that would allow them

to communicate. So as long as your network supported TCP/IP, you could communicate with all of the other networks running TCP/IP. TCP/IP quickly became the standard protocol and allowed networks to communicate with each other.

~~Chapter 5: Networking and Communication – Information ...~~

The Internet Protocol (IP) is the principal communications protocol in the Internet protocol suite for relaying datagrams across network boundaries. Its routing function

Forouzan

Data communications (DC) is the process of using computing and communication technologies to transfer data from one place to another, or between participating parties.

DC enables the movement of electronic or digital data between two or more network nodes, regardless of geographical location, technological medium or data contents.

~~**What is Data Communications (DC)?**~~
