Decisions We Make: How To Figure Things Out - Inductive Reasoning versus Deductive Reasoning is a most unusual book where the reader is taught how to figure things out using a step-by step process developed by one of the nation's leading behavioral scientist and best-selling author, Dr. Treat Preston. This book addresses such issues as the decisions we make, deadly decisions, inductive reasoning, deductive reasoning, reasoning skills, argumentation and debate, argumentation critical thinking in action. It leaves no stone unturned in its effort to teach its readers the value of being able to figure things out and developing a habit of proper decision making. Here is the *TABLE OF CONTENTS: DISCLAIMER AND TERMS OF USE AGREEMENT*: Introduction - There Are Two Sides to Every Argument Chapter 1 - Laying A Proper Foundation Chapter 2 - Inductive Reasoning Chapter 3 - Deductive Reasoning Chapter 4 - Intellectual versus Emotional Decisions Chapter 5 - Why We Must Decide Chapter 6 - Summing It All Up I Have a Special Gift for My Readers Meet the Author The topic of "figuring things out" is not a subject taught in schools and it should be. Learning at a young age the art of reasoning and thinking is an essential tool to take from childhood into adulthood. Decision making should be based on facts and not emotion. Once all of the facts are garnered, a person is free to decide on what side of an argument they actually believe and reside but the decision should be based on fact and not emotion.

This 664 page law and logic book contains the most comprehensive and detailed description of the composition of argument ad hominem ever published, revealing this form of argument to be a far broader fallacy than was previously known. Like perjury, argument ad hominem can deceive juries and cause unjust trial verdicts. There is, fortunately, already a criminal law against perjury, but, unfortunately, there is currently no law that expressly prohibits argument ad hominem in trials. The book includes the text of a proposed criminal law that expressly prohibits argument ad hominem in trials, and shows the necessity of such a law to counter effectively this quite common form of injustice in jury trials. What is knowledge? Why is it valuable? How much of it do we have (if any at all), and what ways of thinking are good ways to use to get more of it? These are just a few questions that are asked in epistemology, roughly, the philosophical theory of knowledge. This is *Epistemology* is a comprehensive introduction to the philosophical study of the nature, origin, and scope of human knowledge. Exploring both classic debates and contemporary issues in epistemology, this rigorous yet accessible textbook provides readers with the foundation necessary to start doing epistemology. Organized around 11 key subtopics, and assuming no prior knowledge of the subject, this volume exposes readers to diverse, often contentious perspectives—guiding readers through crucial debates including Hume's problem of induction, Descartes' engagement with radical skepticism, rationalist and empiricist evaluations of a priori justification, and many more. The authors avoid complex technical terms and jargon in favor of an easy-to-follow, informal writing style with engaging chapters designed to stimulate student interest and encourage class discussion. Throughout the text, a wealth of up-to-date references and links to online resources are provided to enable further investigation of an array of epistemological topics. A balanced and authoritative addition to the acclaimed *This is Philosophy* series, *This is Epistemology* is a perfect primary textbook for philosophy undergraduates, and a valuable resource for general readers with interest in this important branch of philosophy.

Recent Barna research indicates that less than one in ten evangelical Christians hold a biblical worldview. *A World of Difference* seeks to change this disturbing fact by educating readers on how the Christian perspective is uniquely reasonable, verifiable, and liveable. Author Kenneth Richard Samples faced a profound test of his own belief system during a personal life-and-death crisis. In *A World of Difference*, he uses nine distinct tests to compare the Christian worldview with current religious and philosophical competitors, including Islam, postmodernism, naturalism, and pantheistic monism. Samples tackles tough issues through this in-depth study of Christianity's history, creed, and philosophical basis. An excellent resource for readers who want their view of life and the world to make sense.

The song "John Henry," perhaps America's greatest folk ballad, is about an African-American steel driver who raced and beat a steam drill, dying "with his hammer in his hand" from the effort. Most singers and

historians believe John Henry was a real person, not a fictitious one, and that his story took place in West Virginia--though other places have been proposed. John Garst argues convincingly that it took place near Dunnavant, Alabama, in 1887. The author's reconstruction, based on contemporaneous evidence and subsequent research, uncovers a fascinating story that supports the Dunnavant location and provides new insights. Beyond John Henry, readers will discover the lives and work of his people: Black and white singers; his "captain," contractor Frederick Dabney; C. C. Spencer, the most credible eyewitness; John Henry's wife; the blind singer W. T. Blankenship, who printed the first broadside of the ballad; and later scholars who studied John Henry. The book includes analyses of the song's numerous iterations, several previously unpublished illustrations and a foreword by folklorist Art Rosenbaum.

Do preaching and apologetics go together? If so, why and how? In a post-everything age where doubt is enshrined as a hallmark of truth and any claims to truth are highly suspect, how is a preacher to reach those with questions about the reliability of the Bible, the goodness of God, or the resurrection of Jesus? These questions and more are answered here, and a practical, workable method is provided for preachers who seek to bring together the pulpit and apologetics for both evangelism and discipleship.

Research is such an important subject for information professionals that there will always be a need for effective guides to it. Research skills are a prerequisite for those who want to work successfully in information environments, an essential set of tools which enable information workers to become information professionals. This book focuses on producing critical consumers of research. It also goes some way towards producing researchers in the fields of information management and systems. The first edition of this book was enthusiastically received by researchers, students and information professionals in Australia and beyond. Reviews of the first edition considered it a "a worthwhile addition to any information professional's or research student's reference shelf (Archives & Manuscripts). This new edition has an additional chapter on ethics, to address the importance of the ethical implications of research. It also has (as did the first edition) two unique characteristics: it is Australian-focused, distinctive among research texts for information professionals; and it has a multi-disciplinary focus, with its authors being drawn from information management (librarianship, archives and recordkeeping) and information systems. The numerous examples throughout the book are drawn from these multiple disciplines. The first edition of this book was road-tested with students from several disciplines who are studying in several universities. Its Introduction noted that "In research terms, the content have been refereed and found to be authoritative!" To this can be added the many satisfied users of the first edition.

Markets, Politics and the Environment answers three groups of question: 'What is planning?' and as part of this 'What are its key features as a style of social practice and action?' and 'How does planning as a style of social practice relate to social and economic change? How, as part of the justification for planning, might claims of valid technical knowledge be constructed? What is meant by 'rational'? What is the contribution of pragmatism as a supplement or replacement to rationalism? How might rationality and pragmatism be adapted to postmodernism and the requirements of diversity? Finally, how may concepts of planning be reoriented towards sustainable development as a collective duty? How might sustainable development be reworked in relation to planning as a means of managing and stimulating change? Each group of question is discussed in a separate chapter and is associated with different theories, debates and examples of practice. Markets, Politics and the Environment concludes that the full implications of sustainable development and climate change point in the direction of a different type of state- a green state whose future functioning can draw on planning theory but at present can only be conceived as a sketchy outline.
