Optimizing a Diesel Engine Aftertreatment System with MATLAB and GT-SUITE By Seth DeLand, MathWorks, and Ryan Dudgeon, Gamma Technologies Over the past decade, diesel engine aftertreatment systems have been developed rapidly to comply with strict diesel emission standards-which have also changed rapidly during this period.

~~Optimizing a Diesel Engine ... - MATLAB & Simulink~~  
Diesel Engine Model Modern Diesel engines use a variable geometry turbocharger (VGT) and exhaust gas recirculation (EGR) to reduce emissions. Tight control of the VGT boost pressure and EGR massflow is necessary to meet strict emission targets.

The Simscape™ Driveline™ Engine library provides blocks for combustion-engine modeling. You can model a single-cylinder spark-ignition and diesel engines, or a reciprocating engine that contains multiple cylinders. You can also model just the piston mechanism of a combustion engine using the Piston block.

~~Engines - MATLAB & Simulink~~  
I am having difficulty creating a Diesel Engine model. I would like to replicate a certain engine in Simulink and connect it to a fixed pump. I have PSI and GPM results on a pump being used to power a hydraulic tool. This model is to replicate a work truck with hydraulic components i.e. the diesel engine powering the pump for the hydraulic tools to perform.

~~Modeling diesel engine in simulink - MATLAB Answers ...~~  
Open the Diesel Engine Governor block. Note that the initial value of mechanical power has been set to 0.00027 pu (844 W) by the Load Flow tool. 7. Open the EXCITATION block and note in the Initial values tab that the initial values of terminal voltage and field voltage are set respectively to 1.0 and 1.4273 pu.

~~Emergency Diesel Generator and Asynchronous Motor - MATLAB ...~~  
Define rigid bodies and assemble them to model a piston. Reuse piston components to model a four-cylinder engine.

~~Modeling an Engine - Video - MATLAB & Simulink~~  
Model-Predictive Control of Diesel Engine Airpath Rong Chen, MathWorks Pete Maloney, MathWorks Due to coupling in system dynamics, traditional single-loop PI controls prove to be insufficient.

MATLAB provides a standard Python setup.py file for building and installing the engine using the distutils module. You can use the same setup.py commands to build and install the engine on Windows ®, Mac, or Linux ® systems. Each MATLAB release has a Python setup.py package. When you use the package, it runs the specified MATLAB version.

Stirling engines absorb heat from an external source to partially transform it into mechanical power, and dissipate the rest in a cold thermal sink. The external heat source is the key difference with internal combustion engines, which produce heat from combustion reactions in the gas inside the system. In Stirling engines the gas is inert (for example, air, in this case). Model overview. The ...
