The PFD file "BESS with PWM-Converter 2" contains the BESS with PLL. The PLL makes the model more robust in case of very deep voltage sags. The PWM converter (ElmVscmono) uses directly the voltage angle (real and imaginary part) if no PLL is connected. This can ...

The Unit Commitment and Dispatch Optimisation module was new in PowerFactory 2019. The module solves the unit commitment linear-programming problem over a predefined period of time, while optimising the operating point of the dispatched generators so as to minimise overall operating costs. The attached project has been set up to allow a Unit Commitment and Dispatch Optimisation simulation to ...
