This inaugural Handbook of Oncology Social Work: Psychosocial Care for People with Cancer, provides, for the first time, a repository of the breadth and scope, art and science, of oncology social workers' practice, education, research, policy and program leadership in the psychosocial care of people with cancer and their families.

CBT is the most widely endorsed Evidence Based Treatment (EBT) for psychological disorders. This innovative volume exclusively addresses CBT Supervision, which plays a vital role in the translation of CBT from an EBT to routine practise. Supervision requires a combination of knowledge and skill – the knowledge of the appropriate CBT protocol for the situation and the skill to equip the practitioner with the competencies to deliver these protocols in the context in which they are operating. In Simply Effective CBT Supervision, Michael J. Scott provides a unique guide to the particular skills necessary to monitor the fidelity and competence with which an EBT is implemented. There is an emphasis throughout on the importance of experiential learning, with detailed transcripts of supervisor-supervisee conversations, a focus on group supervision and the management of group processes. The power differential between supervisor and supervisee is acknowledged and addressed with guidelines and safeguards that will ensure that client needs can be addressed in a spirit of collaborative empiricism, and the text also covers the importance of matching the supervisor and supervisee. The book also incorporates downloadable worksheets for supervisor and supervisee. Covering the skills necessary to be an effective CBT supervisor, this is the ideal book for current and prospective CBT supervisors looking to extend their knowledge base.

This handbook offers practical strategies and evidence-based parent-implemented interventions for very young children with autism spectrum disorder (ASD). It explores this important subject within the context of rapidly increasing numbers of toddlers who are diagnosed with ASD during the second year of life. The handbook discusses how parents of young children with ASD can effectively be supported, taught, and coached to implement evidence-based parenting strategies and intervention techniques, and describes a broad range of developmentally appropriate programs at the family, community, and service delivery levels. In addition, the handbook examines individual differences in parenting cognitions, emotions, and practices and proposes strategies for supporting the varying capacities of diverse families to meet the needs of young children with ASD. Chapters provide diverse coverage, spanning cultural/socio-economic differences as well as differences in family structure, parenting cognitions, emotions, and practices, parental learning styles, and access to social support. Featured topics include: Supporting families of high-risk infants who have an older sibling with ASD. The use of video feedback strategies in parent-mediated early ASD intervention. The Incredible Years Program for preschool children with ASD and language delays. Self-help for parents of children with ASD. The Family Implemented TEACCH for Toddlers (FITT) support model. Parent-implemented interventions for underserved families in Taiwan. Family and provider-based interventions in South Asia. The Handbook of Parent-Implemented Interventions for Very Young Children with Autism is a must-have resource for researchers, clinicians/professionals, and graduate students in clinical child, school, and developmental psychology, family studies, behavioral therapy, and social work as well as rehabilitation medicine/therapy, child and adolescent psychiatry, pediatrics, and special education/educational psychology.

The U.S. military has been continuously engaged in foreign conflicts for over two decades. The strains that these deployments, the associated increases in operational tempo, and the general challenges of military life affect not only service members but also the people who depend on them and who support them as they support the nation æt' their families. Family members provide support to service members while they serve or when they have difficulties; family problems can interfere with the ability of service members to deploy or remain in theater; and family members are central influences on whether members continue to serve. In addition, rising family diversity and complexity will likely increase the difficulty of creating military policies, programs and practices that adequately support families in the performance of military duties. Strengthening the Military Family Readiness System for a Changing American Society examines the challenges and opportunities facing military families and what is known about effective strategies for supporting and protecting military children and families, as well as lessons to be learned from these experiences. This report offers recommendations regarding what is needed to strengthen the support system for military families.

**Evidence-Based Diabetes Care is designed to help clarify the strengths and weaknesses upon which current clinical practice is based. This is a valuable source of important, up-to-date information for all clinicians and researchers concerned with improving the quality of life of those affected by diabetes and its subsequent complications. Comprehensive commentary encompasses the areas of diabetes epidemiology, assessment of diagnostic tests, and development and assessment of management options.**

**Now revised and expanded with over 508 new material, this definitive clinical reference is the text of choice for graduate-level courses in evidence-based psychotherapy. Foremost authorities describe the conceptual and scientific foundations of cognitive-behavioral therapy (CBT) and provide a framework for assessment and case formulation. Major approaches are reviewed in detail, including emotion-centered problem-solving therapy, rational emotive behavior therapy, cognitive therapy, schema therapy, mindfulness- and acceptance-based interventions, and dialectical behavior therapy (DBT). Applications to specific populations are discussed, including children and adolescents, couples, culturally diverse clients, and more. New to This Edition \*Chapter on clinical assessment. \*Chapter on DBT. \*Chapters on transdiagnostic treatments, CBT-based prevention models, and**

**Published by WHO, Lucerne University of Applied Sciences and Arts, and the University of New Hampshire, this toolkit provides academics and decision-makers with strategies for conducting national or regional studies of the incidence of and agency response to child maltreatment. These studies are developed based on the collection of administrative data or through surveys of professionals. Such research is important to policy-makers who need information about which agencies have knowledge of the problem of child maltreatment, and their response when they encounter it. Based on this information, they can plan how to improve practices, enhance systems and strengthen professional capacity.--Publisher description.**
