Violence is one of the most important challenges, not only for public health systems, but also for public mental health.

Violence can have immediate as well as long-term and even transgenerational effects on the mental health of its victims.

This book provides a comprehensive and wide-ranging assessment of the mental health legacy left by violence. It addresses the issues as they affect states, communities and families, in other words at macro-, meso- and microlevels, beginning by describing the impact of violence on neurobiology and mental health, as well as the spectrum of syndromes and disorders associated with different forms of violence. The work moves on to tackle violence at the international—and intranational—level before zeroing in on the nature of violence in communities such as villages or city districts. It also examines the results of violence in the family. Each type of violence has distinct effects on mental health and in each chapter specific groups are explored in depth to demonstrate the heterogeneity of violence as well as the diversity of its outcomes in the realm of public mental health. Finally, the book addresses the notion of 'undoing violence' by detailing case studies of effective interventions and prevention occurring in countries, communities and families. These cases give us pause to reflect on the nature of resilience and dignity in the context of violence and mental health. All the chapters have been written by leading authors in the field and provide a state-of-the-art perspective. The authors, from different fields of expertise, facilitate interdisciplinary and international insights into the impact of violence on mental health.

The purpose of investigating the overlaps between architecture and biology is neither to draw borders or make further distinctions nor to declare architecture alive, but to clarify what is currently happening in the blurred fields, and to investigate the emerging discipline of „ biomimetics in architecture" [Architekturbionik]. An overview of the present state of research in the relatively young scientific field of biomimetics shows the potential of the approach. The new discipline aims at innovation by making use of the subtle systems and solutions in nature having evolved within millions of years. Approaches that have been taken to transfer nature's principles to architecture have provided successful developments. The new approach presented in this book transfers the abstract concept of life onto built environment. Strategic search for life's criteria in architecture delivers a new view of architectural achievements and makes the innovative potential visible, which has not been exploited yet. A selection of case studies illustrates the diversity of starting points: from vernacular architecture to space exploration.

Bio-Architecture studies the natural principles of animal and human constructions from several different perspectives, and presents a great part of the knowledge that gives origin and shape to built form. Organic architecture offers a design approach arising from natural principles, bringing us back to local history, tradition, and cultural roots to give us built forms which are in harmony with nature. It also shows how architects can take advantage of the resources that contemporary technology has placed within our grasp. Bio-Architecture is a unique book that studies the natural principles of animal and human constructions from several different perspectives and looks at what gives origin and shape to built form. The text gives an informative, inspiring overview of the drive toward organically informed design both intrinsically and aesthetically using a wide variety of international examples. Javier Senosiain is an architect and an historian. He has pursued his interest in Organic Architecture across the globe drawing parallels between Buckminster Fuller's Geodesic dome and the spider's web; between Santiago Calatrava's Cathedral of St John in NY and the roots of a tree. Where nature has inspired form, Senosiain has made a career of analyzing and applying the principles he sees in some very creative writing and architecture.

Nature has always been a source of inspiration for the design of the human environment. The analysis of biological constructions can not only lead to astonishing technical solutions but can also inspire the design of architecture. Bionics is a fascinating border area between pure research and practical application: biologists, chemists, physicists, mineralogists, and paleontologists meet up with material scientists, engineers, and architects and transfer their knowledge to architecture and construction. Using numerous practical examples, this richly illustrated introduction traces the process from the understanding of how something functions, to abstraction—for example in computer models—and the construction of initial prototypes, through to fully functional manufacture and production.

Many of the earliest books, particularly those dating back to the 1900s and before, are now extremely scarce and increasingly expensive. We are republishing these classic works in affordable, high quality, modern editions, using the original text and artwork.

As global capitalism expands and reaches ever-further corners of the world, practical problems continue to escalate and repercussions become increasingly serious and irreversible. These practical problems carry with them equally important and ethical issues. Global Ethics and Environment explores these ethical issues from a range of perspectives and uses a wide range of case studies. Chapters focus on: the impact of development in new industrial regions; the ethical relationship between human and non-human nature; the application of ethics in different cultural and institutional contexts; environmental injustice in the location of hazardous materials and processes; the ethics of the impact of a single event (Chernobyl) on the global community; the ethics of transitional institutions. This collection will both stimulate debate and provide an excellent resource for wide-ranging case study material and solid academic context.
