Causal explanations

this volume is to
increase our
theoretical

understanding of the
way gender operates
in interaction.

Theoretical analyses
of gender's effects in
interaction, in turn,
are necessary to
understand how such
effects might be
implicated with
individual-level and

social structural-level processes in the larger system of gender inequality.

Despite other differences, the contributors to this book all take what might be loosely called a "microstructural" approach to gender and interaction. All agree that individuals

Read Online Double Standards In The Evaluation

come to interaction with certain common, socially created beliefs, cultural meanings, experiences, and social rules. These include stereotypes about gendered activities and skills, beliefs about the status value of gender, rules for interacting in certain

Read Online Double Standards In The Evaluation

settings, and so on.

However, as

individuals apply these beliefs and rules to the specific contingent events of interaction, they combine and reshape their implications in distinctive ways that are particular to the encounter. As a result, individuals actively construct their

Read Online Double Standards In The Evaluation

social relations in the encounter through their interaction. The patterns of relations that develop are not completely determined or scripted in advance by the beliefs and rules of the larger society.

Consequently, there is a reciprocal causal relationship between

constructed patterns
of interaction and
larger social structural
forms. The

constructed patterns
of social relations
among a set of
interactants can be
thought of as micro-
level social structures
or, more simply,
"microstructures.
