This website is a companion to the textbook Plant Physiology and Development, Sixth Edition by Lincoln Taiz, Eduardo Zeiger, Ian M. Møller, and Angus Murphy, published by Sinauer Associates.. For each chapter of the textbook, the site includes Web Topics and Web Essays that expand on the book's coverage, Study Questions for self-review, and chapter References.

~~Plant Physiology and Development, Sixth Edition~~

This has made Plant Physiology the most authoritative, comprehensive, and widely used upper-division plant biology textbook. In the Sixth Edition, the Growth and Development section (Unit III) has been reorganized and expanded to present the complete life cycle of seed plants from germination to senescence. In recognition of this

**Chloroplasts are dynamic organelles
within the plant cell. Movement of
entire chloroplasts to maximize light
absorption was observed long ago by
light microscopy (see textbook, Figure
9.14). Chloroplasts are surrounded by
an envelope membrane, which
sometimes appears to circulate around
the main body of the organelle.**

**Plant Physiology and Development,
Sixth Edition**

Topic 4.4 Leaf Transpiration and Water Vapor Gradients. Transpiration from the leaf depends on two major factors: the difference in water vapor concentration between the leaf air spaces and the the external air and, the diffusional resistance (r) of this pathway. This concept of transpiration is analogous to the flow of electrons in an electric circuit.

~~Plant Physiology & Development 6th Edition - amazon.com~~

The pH in the cytosol of plant cells is around 7.5, and the homogenate should be buffered at pH 7–8. A buffer should therefore be included and a plethora of different buffers are available. Choose an inexpensive one with a pKa of 7–8 (e.g., 4-morpholinopropane sulfonic acid [MOPS]) and be sure to use enough to counterbalance the acidic vacuolar content.
