The best way to get started with DSP is to get your hands dirty. This can be done by selecting a development board with a Cortex M4 processor that supports DSP extensions. There are many boards to choose from, but two of my favorites are the Cypress FM4 starter kit which is based on the S6E2CC series microcontroller and the ST Microelectronics STM32F4-Discovery board .

Get Started with. DSP System Toolbox. Design and simulate streaming signal processing systems. DSP System Toolbox™ provides algorithms, apps, and scopes for designing, simulating, and analyzing signal processing systems in MATLAB® and Simulink®. You can model real-time DSP systems for communications, radar, audio, medical devices, IoT, and other applications.

Chapter 29: Getting Started with DSPs. Once you decide that a Digital Signal Processor is right for your application, you need a way to get started. Many manufacturers will sell you a low cost evaluation kit, allowing you to experience their products first-hand. These are a great educational tool; it doesn't matter if you are a novice or a pro, they are the best way to become familiar with a particular DSP.

Xilinx high-level design tools like Vivado System Generator for DSP and Vivado High Level Synthesis provide a level of abstraction that empower system architects and domain experts to rapidly evaluate new algorithms and focus on developing the differentiating parts of their design. The complete Xilinx DSP solution is a combination of these design tools, IP, reference designs, methodologies and boards that work together to get a working production design in the shortest time possible.
