Promoting the development of a healthy brain can start even before pregnancy. For example, a healthy diet and the right nutrients like sufficient folic acid will promote a healthy pregnancy and a healthy nervous system in the growing baby. Vaccinations can protect pregnant women from infections that can harm the brain of the unborn baby.

and communication are formed in these early years - or not formed.

~~Brain Development — First Things First~~
Core Principles of How the Brain Develops Early in Life The brain is built over time, and it's built from the bottom up. In the beginning, simple early experiences affect and shape the development of simple circuits for simple skills. As time passes and as children have the capacity for more complex behavior, the brain builds more complex

~~Early Brain Growth and Development | Early Childhood ...~~

The most important neurochemical to know about when seeking to understand the brain development of fostered and adopted children is the stress hormone, cortisol. Cortisol is a perfectly normal neurochemical that everybody produces in times of stress and is, in most cases, harmless. However, the amounts that are produced in infants who are abused and/or neglected combine with the fragility of their new brains means that cortisol can be extremely toxic to babies.

~~Brain Development — The Child Psychology Service~~

Following are the few important points you must remember for the healthy Brain development of child. 1. To make sure that the growth is in a good direction, it is very important to give them a proper diet. 2.
