Fundamentals of Environmental Studies is taught as a compulsory paper to first-year undergraduate students across major technical universities in India. This book introduces the fundamental principles and concepts of environmental science, ecology and related interdisciplinary subjects, such as policy, law, pollution control, economics and natural resource management. It covers a wide range of topics and issues including biodiversity, global warming, acid rain, ozone layer depletion, nuclear accidents, nuclear holocaust, disaster management, manipulation of various natural resources including water, land, forests, food and mineral resources, and the problems associated with natural resource management. It also analyzes different types of ecosystems, biochemical cycles and laws of thermodynamics and provides easy-to-understand examples. In addition, the book offers separate chapters on various types of environmental pollution and waste management, including waste water treatment, solid waste management and green management.

the human actions which have made them issues, and the hopes for solutions. It is a book about the human impact on the environment and the ways in which the natural environment impacts human society. The fifth edition has been fully revised and updated throughout, with new case studies, figures, and online resources such as downloadable figures and tables from the text and multiple choice questions for students, accessible at: www.routledge.com/cw/middleton. New topics covered in extended boxed case studies include payment for environmental services, ocean acidification, biofuels in Brazil, waste reduction through industrial symbiosis, and the long-term impact of natural disasters on vulnerable groups. Other approaches and concepts covered for the first time in this new edition include traditional ecological knowledge, environmental justice, the 'resource curse', and urban biodiversity. Eighteen chapters on key issues follow three initial chapters which outline the background contexts of the physical and human environments and the concept of sustainable development. Each chapter provides historical context for key issues, outlines why they have arisen, and highlights areas of controversy and uncertainty to appraise how issues can be resolved both technically and in political and economic frameworks. Each chapter also contains an updated critical guide to further reading and websites, as well as discussion points and essay questions. The text can be read in its entirety or

A Text Book of Environmental Studies (As per UGC Syllabus)

For undergraduate Students. This textbook is simple, comprehensible, illustrated and documented account of the state of environment, wildlife and natural resources today. The book covers all aspects of the subject which students of graduate classes should be ware of not for their own sake but for the sake of forging a pattern of right conduct towards the nature, natural resources and the environment.

It deals with all essential aspects of Environment especially useful for all undergraduate students. It deals primarily with all aspects of Man and Environment, Ecology and eco systems. In this detail discussion on productivity, Food chain, Food Web, Pyramid numbers and Ecological succession It also discusses on various aspects of Biodiversity. The book provides information on all aspects of Environmental pollution particularly on kinds of pollution and their remedial measures. Social issues like sustainable and unsustainable development is another aspect particularly related to water conservation, climate change and wasteland reclamation. It also discusses on the issue of enforcement of various legislations like Air pollution control the water Act etc. Unless a discussion is provided on current topics in Environmental pollution the book

will not serve its purpose. Hence all important issues which create pollution have also find a place in discussions. Waterborne diseases are important parts and their particular importance because of primary and secondary pollutants. Disaster Management also finds a prominent part in the book as without such discussion no useful purpose will be served. In addition brief discussion on all legislations have been provided in the appendix I in concise manner. In addition there are Five more appendixes provided which provide specific questions and answers on various important chapters provided in the book. Hope through this reader will be able to understand all aspects of environmental studies in a comprehensive way and shall be able to understand and answer any type of question. Salient Features: Man and Environment, Ecology and Environment, Concept and Scope of Environmental Chemistry, Ecological Succession, Different Types of Pollution, Current topics in Environmental Pollution and Disaster Management
