The Childhood Health Assessment Questionnaire (CHAQ), a widely used valid and reliable measure of physical function in children with rheumatic diseases is adapted from the Health Assessment Questionnaire (HAQ) [17, 42–44]. The HAQ, used widely in adults, takes into account drug side effects, death and dollar costs in addition to disability, discomfort and pain, although the commonly used components for outcome studies are the disability index, discomfort and pain scales.

Evaluation Tools Pediatric Physical Therapy

A physical therapy assessment form is a document which is used by physical therapists for their patients and clients. The form can be used for initial assessments and final assessments in determining a patient's medical history as well as the patient's therapy progress. On the other hand, physical therapy assessment forms can also be used by physical therapy students and teachers for them to identify areas to be corrected in lieu of the course or program that they plan to accomplish as ...
