chapter 16 evolution of populations Flashcards and Study ...
Chapter 16 Evolution of Populations 16-1 Genes and Variation Darwin's original ideas can now be understood in genetic terms. Beginning with variation, we now know that traits are controlled by genes and that many genes have at least two forms, or alleles. We also know that all species are heterozygous for many genes. To understand evolution, genetic variation

Chapter 16 Evolution of Populations Summary
random change of allele frequencies in large populations: founder effect: gene frequencies change due to the migration of a small subgroup of a population: Hardy Weinberg Principle: allele frequencies will remain constant unless one or more factors cause a change ($p^2 + 2pq + q^2$) genetic equilibrium
