with the top of the block (where the intake sits). The water passages are also right at the top of the block (where the heads sit). The image below shows a 302 block. A 351W block is taller. So, the distributor mount is below the block surface where the intake sits.

### **What's the difference between a 302 and a 351W?**

The 351 displaced 351 cubic inches and had a 4.0-inch bore and a 3.50-inch stroke. Its most distinctive characteristic was its unusual 1-5-4-2-6-3-7-8 firing order, not found on any other Ford engine. The main bearing caps were stronger, and the connecting rods larger than

those on the 289 and 302. Ford produced the 351W from 1969 to 1974.

### **What Is the Difference Between a Ford 302, 289 & 351 ...**

From 1977 onward, the 351W shared the same head casting as the 302, differing only in bolt hole diameters (7/16 inch for 302, 1/2 inch for 351W). Early blocks (casting ID C9OE-6015-B) had enough metal on bearing saddles 2, 3, and 4 for four-bolt mains, and as with all small-block Fords (SBFs), were superior in strength to most late-model, lightweight castings.
