*The narratives and metaphors used in these constructions draw on resources close to hand such as the material organization of state factory compounds, state personnel encountered in the course of everyday life, and images of the family structure. By also exploring notions of state and personhood within the highest echelons of the administration itself, Alexander shows how ideas of 'the state' recede once one is actually 'within'. For officials the state becomes other institutions and Ministries with which they have little contact. Elias (13, ik-persoon) is al zijn jarenlang erg ziek. Hij kan alleen beter worden door een donorhart. Eindelijk is het zo ver... Als Elias na de operatie wakker wordt, staat een onbekende jongen naast zijn bed. Hij heet Boyd en is net overleden. Het lijkt alsof Elias de enige is die Boyd kan zien. Vanaf ca. 12 jaar.*

**What role does an animal play in a child's developing sense of self? Do children and animals interact in ways no longer recognizable to adults? Children and Animals addresses these and many other intriguing questions by revealing the interconnected lives of the inhabitants of the preschool classroom—an environment abounding in childish verbal and nonverbal interactions with birds, turtles, toads, snakes, bugs, and other creatures. The child-animal interactions captured here suggest that the young child's developing sense of self and interactive skills are honed and enriched by the presence of nonhuman creatures. In touching and playing with animals, in talking to them or in silent presence, children reveal feelings and objectives they share with these important members of their daily lives. A privileged route by which these meanings are expressed and made conscious is pretend play, in which children translate the shapes and moods of the animal body into their own. As adults, we tend to marginalize the role of the animal body and animals' presence in our lives. In contrast, children see animals as co-conspirators, as creatures to contend with, as fascinatingly different yet similar “other beings.” Children's sense of connection to animals provides insights into social development—and into our ideas about what it means to become human. Based on Gene Myers' study of two dozen children, and containing excerpts from children's dialogues with their nonhuman playroom cohabitants, this book is a delightful and rewarding opportunity to learn how children craft a sense of self that differentiates them from the animal world. It captures in a child's own words the importance of animals, birds, and reptiles to the child's growing social self. Parents, educators, and students of early childhood social development, as well as those intrigued by the intersection of human experience and the natural environment, will find this book to be a rewarding reading experience.**

**Wittgenstein: Connections and Controversies consists of thirteen thematically linked essays on different aspects of the philosophy of Wittgenstein, by one of the leading commentators on his work. After an opening overview of Wittgenstein's philosophy the**

following essays fall into two classes: those that investigate connections between the philosophy of Wittgenstein and other philosophers and philosophical trends, and those which enter into some of the controversies that, over the last two decades, have raged over the interpretation of one aspect or another of Wittgenstein's writings. The connections that are explored include the relationship between Wittgenstein's philosophy and the humanistic and hermeneutic traditions in European philosophy, Wittgenstein's response to Frazer's Golden Bough and the interpretation of ritual actions, his attitude towards and criticisms of Frege (both in the Tractatus and in the later philosophy), the relationship between his ideas and those of members of the Vienna Circle on the matter of ostensive definition, and a comparison of Carnap's conception of the elimination of metaphysics and of Strawson's rehabilitation of metaphysics with Wittgenstein's later criticisms of metaphysics. The controversies into which Hacker enters include the Diamond-Conant interpretation of the Tractatus (which is shown to be inconsistent with the text of the Tractatus and with Wittgenstein's explanations of and comments on his book), Winch's interpretation of the Tractatus conception of names, Kripke's interpretation of Wittgenstein's discussion of following a rule (which is demonstrated to be remote from Wittgenstein's intentions), and Malcolm's defence of the idea that Wittgenstein claimed that mastery of a language logically requires that the language be shared with other speakers. These far-ranging essays, several of them previously unpublished or difficult to find, shed much light upon different aspects of Wittgenstein's thought, and upon the controversies which it has stimulated.

***Advanced technology is constantly creating new possibilities for the achievement of architectural intentions. However, there are very few books available which seek to explore the relationship between the overall intention of a project and the means of creating it. Instead, architects have had to rely on manufacturers literature and journal articles for knowledge of the new techniques of building. This collection of case studies combines the highly acclaimed volumes Connections and The Building Envelope placing the details of good modern buildings in context with each other and explaining the relationship between them. Thus the authors provide an essential database for designers working in the field of large-scale construction. The buildings are analysed on a comparative basis, and the examples and their respective details are assessed in such a***

**way as to illustrate the full range of workable alternatives available to the designer and architect through advances in current building technology. The combined volume offers practising architects, engineers and quantity surveyors a state-of-the-art update on new developments and a guide to their understanding that is essential for the 1990s. The book will also be invaluable to undergraduate students in architecture and building.**

**Although the semirigidity concept was introduced many years ago, steel structures are usually designed by assuming that beam-to-column joints are either pinned or rigid. These assumptions allow a great simplification in structural analysis and design-but they neglect the true behavior of joints. The economic and structural benefits of semirigid joints are well known and much has been written about their use in braced frames. However, they are seldom used by designers, because most semirigid connections have highly nonlinear behavior, so that the analysis and design of frames using them is difficult. In fact, the design problem becomes more difficult as soon as the true rotational behavior of beam-to-column joints is accounted for-the design problem requires many attempts to achieve a safe and economical solution. Structural Steel Semirigid Connections provides a comprehensive source of information on the design of semirigid frames, up to the complete detailing of beam-to-column connections, and focuses on the prediction of the moment-rotation curve of connections. This is the first work that contains procedures for predicting the connection plastic rotation supply-necessary for performing the local ductility control in nonlinear static and dynamic analyses. Extensive numerical examples clarify the practical application of the theoretical background. This exhaustive reference and the awareness it provides of the influence of joint rotational behavior on the elastic and inelastic responses of structures will greatly benefit researchers, professionals, and specification writing bodies devoted to structural steel.**

*Because theories of visual perception have traditionally concentrated on form, artists have generally dealt with the problem of color through their own observation and intuition. In Color Harmonies, Augusto Garau systematically investigates the role of both color and form in visual perception and*

*presents an original theory of the aesthetic relations among colors. Garau, a painter who teaches the psychology of form, pays particular attention to the way colors behave when organized in patterns. His theory of color combination addresses two principal compositional elements: the relations between figure and ground and the phenomenon of transparency. Garau meticulously analyzes the use of color in paintings by masters such as Cézanne, Picasso, and Matisse to show how his theory applies to actual works of art. Containing many full-color examples, his introduction to the workings of color relations is of great practical use to art historians and critics, artists, interior decorators, fashion and set designers, and anyone who works with color to display information or convey emotions. "In an area of the psychology of art where reliable guidance is still so hard to come by, [Garau's] well-supported contributions to the theory of color composition ought to be welcomed by practitioners and scholars alike."—from the Foreword by Rudolf Arnheim*

**The Anglo-Saxon influence on the Carolingian world has long been recognised by historians of the early medieval period. Wilhelm Levison, in particular, has drawn attention to the importance of the Anglo-Saxon contribution to the cultural and ecclesiastical development of Carolingian Francia in the central decades of the eighth century. What is much less familiar is the reverse process, by which Francia and Carolingian concepts came to influence contemporary Anglo-Saxon culture. In this book Dr Story offers a major contribution to the subject of medieval cultural exchanges, focusing on the degree to which Frankish ideas and concepts were adopted by Anglo-Saxon rulers. Furthermore, by concentrating on the secular context and concepts of secular government as opposed to the more familiar ecclesiastical and missionary focus of Levison's work, this book offers a counterweight to the prevailing scholarship, providing a much more balanced overview of the subject. Through this reassessment, based on a close analysis of contemporary manuscripts - particularly the Northumbrian sources - Dr Story offers a fresh insight into the world of early medieval Europe.**

"Imperial Connections challenges the Eurocentrism implicit in many accounts of modern European empires. Focusing on the British empire when it was at its zenith, Metcalf analyzes the pivotal role the Raj played in the running of the empire in regions as far flung from one another as, say, Egypt, Uganda, Natal, and the Malay peninsula. This innovative book is a real tour de force from a respected and versatile historian of India."—Dipesh Chakrabarty, author of *Provincializing Europe: Postcolonial Thought and Historical Difference* "As he has done regularly throughout his career, Thomas Metcalf has once again refreshed the study of British imperial history with a bold new perspective. *Imperial Connections* puts South Asians—soldiers, policemen and labourers—right at the heart of his study."—C.A. Bayly, Cambridge University, author of *The Birth of the Modern World* "This is a distinctly original study which re-centers colonial power in provocative ways. Metcalf asks a simple question—why were Indians so persistently to be found elsewhere in the British empire, and in such significant numbers? Then elegantly offers answers that force us to re-think the operations of imperial power in critical ways. Wide-ranging, elegantly written, and meticulously researched, Metcalf's is an important and a persuasive study."—Philippa Levine, author of *Prostitution, Race and Politics: Policing Venereal Disease in the British Empire*, and forthcoming, *The British Empire, Sunrise to Sunset*

This study traces Edgar Allan Poe's contribution to the Gothic tradition and his invention of the detective tale. It explores the connections between these genres in British and American writers influenced by Poe, such as Arthur Conan Doyle, Robert Louis Stevenson, Thomas Harris, and Stephen King. This book also examines women writers strongly influenced by Poe, such as Joyce Carol Oates, Sara Paretsky, and Sue Grafton. The last chapter of the volume considers films - in particular, the Roger Corman Poe series, *Chinatown*, *Seven*, and *Blade Runner* - that connect the horror and detective genres.
