Topics include developer tools, security, and debugging.

Oracle GlassFish Server Online Documentation Library

Accessing the Naming Context. The Oracle GlassFish Server provides a naming environment, or context, which is compliant with standard Java EE requirements. A Context object provides the methods for binding names to objects, unbinding names from objects, renaming objects, and listing the bindings. The InitialContext is the handle to the Java EE naming service that application components and clients use for lookups.

by Sun Microsystems, then sponsored by Oracle Corporation, and now living at the Eclipse Foundation and supported by Payara, Oracle and Red Hat. The supported version under Oracle was called Oracle GlassFish Server. GlassFish is free software and was initially dual-licensed under two free software licences: the Common Development and Distribution License and the GNU General Public License with the classpath except

GlassFish - Wikipedia

In this chapter, we discussed how to download and install GlassFish. We also discussed several methods of deploying the Java EE application through the GlassFish web console, through the asadmin command, and by copying the file to the autodeploy directory. We also discussed basic GlassFish administration tasks like setting up domains and setting up Database Connectivity by adding connection pools and data sources.
