~~The Java 8 runtime on the App Engine standard environment makes it easy to build and deploy an application that runs reliably under heavy load and with large amounts of data. Your application runs within its own secure, reliable environment that is independent of the hardware, operating system, or physical location of the server.~~

~~Google App Engine Java 8 Standard Environment documentation~~

~~App Engine locations. App Engine is regional, which means the infrastructure that runs your apps is located in a specific region, and Google manages it so that it is available redundantly across all of the zones within that region.. Meeting your latency, availability, or durability requirements are primary factors for selecting the region where your apps are run.~~

~~Quickstart for Python 3 in the App Engine ... - Google Cloud~~

~~App Engine locations. App Engine is regional, which means the infrastructure that runs your apps is located in a specific region, and Google manages it so that it is available redundantly across all of the zones within that region.. Meeting your latency, availability, or durability requirements are primary factors for selecting the region where your apps are run.~~

~~Quickstart for PHP 7 in the standard ... - Google Cloud~~

~~Test DPC is a sample device policy controller for use with Android Enterprise. It gives developers the ability to see how their app will behave in a managed context such as device owner or within a managed profile. Users can set up a work profile, enable work apps, set applications restrictions, manage security polices, and much more.~~
