Online Library Guide To Minerals Rocks And Fossils

Hornblende—The most common mineral of the amphibole group.

Muscovite—White mica, found in all kinds of rocks. *Olivine*—A green mineral found strictly in igneous rocks.

Pyroxene —A group of dark minerals of igneous and metamorphic rocks.

Quartz—Familiar as crystals and as noncrystalline chalcedony.

Picture Guide to Common and Less-Common Minerals
The Mica Group is the

Online Library Guide To Minerals Rocks And Fossils

name given to a group of silicate minerals that have silicon and oxygen as their two major components. Muscovite is a member of the mica mineral group. It is more important as a rock-forming mineral than as a collectible specimen. Olivine is a group of minerals that come from magma. It is important as a rock-forming mineral.
