Using the Harvard Case Method, Accounting for Managers covers both financial and managerial topics in one term. It is designed for use at the graduate (MBA) level, or by advanced undergraduates and/or advanced AACSB schools. While this textbook does not ask the student to know everything accountants do, it does introduce them to the terminology forms and formats of financial statements and accounting analyses and illustrations. This approach is employed so the students can comprehend much of what goes on. Accounting for Managers will prepare your students to deal with the current and future developments which face accountants and managers in situations where complex financial transactions, events, and status must be communicated.

This book contains the proceedings of two well established scientific events held in connection with the CAISE conferences relating to the areas of enterprise, business-processes, and information systems modeling: - The 11th International Workshop on Business Process Modeling, Development and Support (BPMDS 2010); - The 15th International Conference on Exploring Modeling Methods for Systems Analysis and Design (EMMSAD 2010). The two events are introduced briefly below. BPMDS 2010 was the 11th in a series of workshops that have successfully served as a forum for raising and discussing new ideas in the area of business process development and support. The BPMDS series has produced 10 workshops from 1998 to 2009. Eight of these workshops, including the last seven (BPMDS 2003-BPMDS 2009) were held in conjunction with CAISE conferences. The BPMDS workshops focus on topics relating to IT support for business processes, which addresses key issues that are relevant to the continuous development of information systems theory. The continued interest in these topics within the industrial and academic IS communities is reflected by the success of the last BPMDS workshops and the emergence of new conferences devoted to this theme. Previous BPMDS workshops focused on the different phases in the business process lifecycle as well as the drivers that motivate and initiate business process design and evolution.

The Practical, Start-to-Finish Guide to Planning and Leading Iterative Software Projects Iterative processes have gained widespread acceptance because they help software developers reduce risk and cost, manage change, improve productivity, and deliver more effective, timely solutions. But conventional project management techniques don't work well in iterative projects, and newer iterative management techniques have been poorly documented. Managing Iterative Software Development Projects is the solution: a relentlessly practical guide to planning, organizing, estimating, staffing, and managing any iterative project, from start to finish. Leading iterative development experts Kurt Bittner and Ian Spence introduce a proven, scalable approach that improves both agility and control at the same time, satisfying the needs of developers, managers, and the business alike. Their techniques are easy to understand, and easy to use with any iterative methodology, from Rational Unified Process to Extreme Programming to the Microsoft Solutions Framework. Whatever your role—team leader, program manager, project manager, developer, sponsor, or user representative—this book will help you understand the key drivers of success in iterative projects Leverage "time boxing" to define project lifecycles and measure results Use Unified Process phases to facilitate controlled iterative development Master core concepts of iterative project management, including layering and evolution Create project roadmaps, including release plans Discover key patterns of risk management, estimation, organization, and iteration planning Understand what must be controlled centrally, and what you can safely delegate Transition smoothly to iterative processes Scale iterative project management from the smallest to the largest projects Align software investments with the needs of the business Whether you are interested in software development using RUP, OpenUP, or other agile processes, this book will help you reduce the anxiety and cost associated with software improvement by providing an easy, non-intrusive path toward improved results—without overwhelming you and your team.

Teaching and the Case Method delves into the special role of teacher and students in the case method learning process. School faculty who want to use the case method more effectively can use this book to teach groups of faculty how to apply case method techniques. For the first time, too, a book about case method teaching attempts to show how the method can be applied in a liberal arts setting. This liberal arts module in the book presents an innovative program for instructors who want to experiment with discussion teaching in the liberal arts and science areas. The book focuses on a wide range of knotty problems faced by most instructors, experienced or new, offering an opportunity for them to learn from each other. It's main purpose is to provide a rich opportunity for both professional school and liberal arts instructors to develop their own discussion leadership skills, and to further the process of learning for both themselves and their students. Innovations in Competitive Manufacturing is an examination of manufacturing innovations - both technical and knowledge-based. Over the recent past, technology has created dramatic changes in manufacturing. As a result, the book focuses on the use of technology in gaining competitive advantage in global manufacturing. Forty topics are surveyed in the book, organized into thirteen chapters. Each topic is a carefully written account by one or more leading researchers in that area. This is the first systematic examination of the recent innovations in manufacturing strategy and technology. In addition to providing an understanding of these manufacturing innovations, the book underscores the strategic importance of creating and sustaining the technological resources to ensure a stable manufacturing economic base. The book's purpose is to examine the elements that make today's manufacturers successful. Many examples from industry throughout the book will enable the reader to appreciate and comprehend the concepts presented in the article. In addition to the technical and innovative information, implementation issues concerning new ideas and manufacturing practices are explored within the topical discussions. Four in-depth descriptions of real-life cases provide illustration of key principles. The book has been constructed as a reference tool for manufacturing researchers, students, and practitioners. Hence, after reading the introduction 'Innovation in Competitive Manufacturing: From JIT to E-Business', any section or topic in the book can be consulted and/or read in any sequence the reader may choose.

This book uses Kant's idea of imperfect duty to extend the theory of the firm. Unlike perfect duty which is contractual or otherwise legally binding, imperfect duty consists of those commitments of choice that pursue some moral value, but that have practical limits to their pursuit. The author presents a broad view of the imperfect duties of management, defined as a nexus of all commitments to do good involving relations internal and external to the firm. This nexus consists of three overlapping categories of (i) building a virtuous managerial community, (ii) pursuing reasoned managerial discourse, and (iii) diligent and reasoned pursuit of the body of routine managerial duties such as capital budgeting and internal controls. Specific applications of the nexus theory for stakeholder relations via fair negotiation, and for analysis of the effects on the managerial team of perquisite consumption are presented. This book has major implications for research in business ethics and allows critical insights into managerial decision making.

Questioning why research centers so often fail to commercialize discoveries, this book explores the concept of linked innovation, which promises to drive economic sustainability while preserving academic quality at research centers. The author examines the gaps in the innovation process and identifies eight symptoms of broken innovation. Providing empirical research into areas such as performance metrics, design thinking, industry collaboration, and innovation ecosystems, this comprehensive study covers 28 mechanisms and 12 business models for driving growth in those centers. Essential reading for managing directors at research institutions and academics, *Linked Innovation* draws on examples from leading research centers at universities, in industry and government. Based on a four-year analysis of 3,881 centers in 107 countries, the book looks at institutions such as Harvard, Oxford and organizations such as Roche, Google, Fraunhofer and NASA to name a few.

This book describes the principles and techniques in Project Management as applied to Engineering & Construction Contracts (ECC), conforming with relevant international standards (PMI - IPMA - ISO 21500), and pursuing a fully company-wide, process-based,

multi-project approach. Uniquely, the book combines Project Management fundamentals with international contracting practices, which shape the planning, design and construction of large and complex works (such as plants, machinery, infrastructures and buildings) worldwide. The rigorous academic approach is mixed with the managerial contributions of Danieli, one of the world's top three suppliers of plants and equipment to the metals industry. The book has been updated to reflect the PMBOK 6th edition (September 2017), presents best practices in PM from around the globe, and addresses new trends in PM such as Agile, SCRUM, etc. Lastly, a dedicated section covers the professional use of the reference software Microsoft Project.

Today's economy is fueled by knowledge. Every leader knows this to be true, yet few have systematic methods for converting organizational knowledge into economic value. This book argues that communities of practice--groups of individuals formed around common interests and expertise--provide the ideal vehicle for driving knowledge-management strategies and building lasting competitive advantage. Written by leading experts in the field, *Cultivating Communities of Practice* is the first book to outline models and methods for systematically developing these essential groups. Through compelling research and company examples, including DaimlerChrysler, McKinsey & Company, Shell, and the World Bank, authors Etienne Wenger, Richard McDermott, and William M. Snyder show how world-class organizations have leveraged communities of practice to drive strategy, generate new business opportunities, solve problems, transfer best practices, develop employees' professional skills, and recruit and retain top talent. Underscoring the new central role communities of practice are playing in today's knowledge economy, *Cultivating Communities of Practice* is the definitive guide to fostering, designing, and developing these powerful groups within and across organizations.

WHAT IS THE ONE THING not taught in design school, but is an essential survival skill for practicing designers? Working with other people. And yet, in every project, collaboration with other people is often the most difficult part. The increasing complexity of design projects, the greater reliance on remote team members, and the evolution of design techniques demands professionals who can cooperate effectively. *Designing Together* is a book for cultivating collaborative behaviors and dealing with the inevitable difficult conversations. *Designing Together* features: 28 collaboration techniques 46 conflict management techniques 31 difficult situation diagnoses 17 designer personality traits This book is for designers: On teams large or small Co-located, remote, or both Working in multidisciplinary groups Within an organization or consulting from outside You'll also find sidebar contributions from David Belman (Threespot), Mandy Brown (Editorially, A Book Apart), Erika Hall (Mule Design Studio), Denise Jacobs (author), Jonathan Knoll (InfinityPlusOne), Marc Rettig (Fit Associates), and Jeanine Turner (Georgetown University).

Go undercover and explore how finance theory works in practice with *Corporate Financial Management*, fourth edition. Find out how financial decisions are made within a firm, how projects are appraised to make investment decisions, how to evaluate risk and return, where to raise finance from and how, ultimately, to create value.

In recent years, we have witnessed change in organizational accountability, especially toward investment in people, programs, projects, and processes. Project sponsors and those who have responsibility for project success have always been concerned about the value of their initiatives. Today this concern translates into financial impact-the actual monetary contribution from a project or program. Although monetary value is becoming a critical concern, it is the comparison of this value with the project costs that captures stakeholders' attention-and translates into ROI. "Show me the money" is the familiar response from individuals asked to invest (or continue to invest) in organizational efforts. At times, this response is appropriate. At other times, it may be misguided; measures not subject to monetary conversion are also important, if not critical, to most projects. However, excluding the monetary component from a success profile is unacceptable in this age of the "show me" generation. The monetary value is often required before a project is approved. Sometimes, it is needed as the project is being designed and developed. Other times, it is needed after project implementation. This issue is compounded by concern that most projects today fail to live up to expectations. A systematic process is needed that can identify barriers to and enablers of success and can drive organizational improvements. The challenge lies in doing it-developing the measures of value, including monetary value, when they are needed and presenting them in a way so that stakeholders can use them

Contributors provide practical insights on the role of the entrepreneur in the global business context, addressing such issues as value-added chains, cross-border networks, knowledge management, technology transfer, and strategic partnerships between government and corporations.

The primary course for this book is the case course in Finance taught to all finance majors at both the MBA and undergraduate level. This is typically a capstone course at the undergraduate level and either the first or second course at the MBA level. Case Problems in Finance is a Harvard case course that presents real business situations that pose debatable alternative courses of action. The cases contain problems that can be narrowed but not always settled by the usual techniques of financial analysis. The cases are grouped by major topics: financial analysis and forecasting, cost of capital, working capital management, capital budgeting, dividend policy, debt policy, financial execution, and mergers and restructuring.
