CGI stands for Common Gateway Interface. It is a way to let Apache execute script files and send the output to the client. Those script files can be written in any language understood by the server. Yes, you can write a CGI script using BASH, Korn shell, Perl, Python or even C! Tools of the trade In this article we are going to develop an application that will ask the visitor for some ...

Learn CGI scripting using BASH in Linux Shell Scripting ...

We have seen that the creation of CGI scripts is pretty easy. The Web server executes any executable placed in the `cgi-bin` directory, and any output that the executable sends to `stdout` appears in the browser that called the script. Now what we need is a way to send input into a script. The normal way to send input is to use an HTML form. You see forms all over the Web. Any page where you have ...

HTML5 was a major stepping stone for the concept of semantic code. It really championed the idea that how your document is structured and what tags you use should convey meaning to user agents. Among others, the `<section>` and `<article>` elements were introduced as a way

Sectioning Content in HTML5 - `div` or `section` or `article`?

The CGI (Common Gateway Interface) defines a way for a web server to interact with external content-generating programs, which are often referred to as CGI programs or CGI scripts. It is a simple way to put dynamic content on your web site, using whatever programming language you're most familiar with. This document will be an introduction to setting up CGI on your Apache web server, and ...

Apache Tutorial: Dynamic Content with CGI - Apache HTTP ...

For pages on your server but not in `/var/www/html`, using `/css/style.css` is the appropriate form of the relative link, as `/` is equivalent to the local directory `/var/www/html` (that is what setting `DocumentRoot` in Apache does), so `/css` accesses the local directory `/var/www/html/css`.

apache - Where to place css file for perl cgi script ...
