***29 October 2018: The
NASA/ESA Hubble Space
Telescope doesn't usually
get much assistance from its
celestial subjects – but to
take this image, the
telescope opted for***

teamwork and made good use of a fascinating cosmic phenomenon known as gravitational lensing. This effect works when the gravitational influence of a massive object, such as the galaxy cluster in the centre of this image, is so colossal that it warps the surrounding space, causing nearby light to travel along distorted paths.
