Human Performance Enhancement in High-Risk Environments ... Blood doping, a performance-enhancing technique used in competitive cycling, increases red blood cells, improving oxygen transport to muscles for better aerobic performance. A series of Army studies in the 1980s demonstrated that blood doping increased red blood cell counts and improved oxygen intakes by 10 percent in soldiers. 29 Blood doping has significant risks, however.

Human Performance Limited

Performance-enhancing substances, also known as performance-enhancing drugs (PED), are substances that are used to improve any form of activity performance in humans. A well-known example involves doping in sport, where banned physical performance-enhancing drugs are used by athletes and bodybuilders. Athletic performance-enhancing substances are sometimes referred to as ergogenic aids.

Performance-enhancing substance - Wikipedia

Human Performance Enhancement in High-Risk Environments: Insights, Developments, and Future Directions from Military Research takes the breakthrough work being done by the military on human performance issues and presents it in a way that is applicable to a wider audience of high-risk professions and industries, including police forces, fire fighters, the security industry, military contracting, and more.
