Human Thermal Environments The Effects

In the ten years since the publication of the second edition of Human Thermal Environments: The Effects of Hot, Moderate, and Cold Environments on Human Health, Comfort, and Performance, Third Edition, the world has embraced electronic communications, making international collaboration almost instantaneous and global. However, there is still a need for a compilation of up-to-date information and best practices.

Human Thermal Environments: The Effects of Hot, Moderate ...

Ken Parsons states that "Air temperature, radiant temperature, humidity and air movement are the four basic environmental variables that affect human response to thermal environments." As an example, our productivity and health are tied together. When buildings are designed, careful attention is paid to the heating and AC systems in the design.
