## *Intelligent Transportation Systems for Sustainable Development*

*Intelligent transportation systems play an important role in the sustainable development of the world economy. In the era of autonomous driving, intelligent transportation systems will see disruptive transformation and enable smart mobility. However, their success heavily depends on the construction of dynamic maps, which further relies on precision positioning of both moving and static objects, on the road (2-D positioning) or in the sky (3-D positioning).*

## Download File PDF Intelligent Transportation Systems For Sustainable

*connected public transport systems that are more accessible, efficient, safe and sustainable. Explore transportation infrastructure solutions from Microsoft Industry.*

*Intelligent Transportation Systems for Government | Microsoft Black defines sustainable transportation as "one that provides transport and mobility with renewable fuels while minimizing emissions detrimental to the local and global environment and preventing needless fatalities, injuries, and congestion" (p. 264). There is no question that we are far from achieving this goal.*
