**Catalyst Deactivation 1994 was an expansion of earlier, highly successful
symposia. The objective of the symposium was to promote a scientific approach
of the phenomenon of catalyst deactivation which will contribute to the
development of catalysts which are less subject to structural transformations and
more resistant to poisons and coke formation. These aspects are dealt with in 12
plenary lectures, 48 oral presentations and 35 poster papers, which were
critically selected from an impressive response from some 30 countries. Both
fundamental and applied aspects were covered. The deactivation of catalysts in
important industrial processes like fluid bed catalytic cracking hydrotreatment,
hydrodesulfurization, catalytic reforming, hydrodenitrogenation, steam reforming,
hydrodemetallization, hydrocracking, Fischer-Tropsch synthesis, propane
dehydrogenation, phthalic anhydride synthesis received considerable attention.
Mechanisms of poisoning, sintering and coking were further investigated and
modelled and new experimental techniques for the characterization and the
quantification of deactivation were also introduced.**

**General information, timing, maintenance, ignition, trim and tilt, remote control,
fuel injection and other topics about outboards.**
