*In Brief. This study evaluates an obex exploration technique in pediatric patients with Chiari type-I malformation (CM-I). Patients with a syrinx who underwent expansile duraplasty with obex exploration had a significantly greater likelihood of syrinx and symptom resolution compared with bone-only decompression, without a higher risk of CSF-related complications.*

# Read Free Journal Of Pediatric Neurosurgery

no more than 50 years ago, the readership is small, and consequently the impact factors (IF) of the journals are low: Childs Nervous System (1.24), Pediatric Neurosurgery (0.42), and Journal of Neurosurgery: Pediatrics (1.62). The second reason is that many of the articles that we found in this current study were authored by non-neurosurgeons (e.g., medical oncologists, radiation oncologists, intensivists, or a mixture) and, therefore ...
