Understanding Muhammad and Muslims

Encyclopedia of Science

The Marriage of Figaro / Die Hochzeit

Des Figaro / Les Noces de Figaro

Peace cannot be attained as long as there are ideologies that promote hate. People don't naturally do evil. They do evil when indoctrinated. Good people do evil things when they perceive injustice. Often their perception is

imaginary. Masses of people can be manipulated to believe that they are victimized. They then become filled with hate, seek revenge and commit atrocities while considering them-selves righteous and justifying every cruelty. Islam is one such a doctrine. Why are there no freedom of speech and no true democracy in any Islamic country? Why do they abuse and treat their women as objects? Why do all Muslim countries have dismal Human Rights record? Why they riot and murder innocent people over the silliest things? What drives so many of them to terrorism? Why they are constantly at war with everyone, and with each other?

To understand Muslims, we must understand their prophet. Islam is Muhammadism. His biographers reported Muhammad used to withdraw to a cave and spend days wrapped in his thoughts. He felt spasms, heard bells ringing and saw ghosts. He thought he had become demon possessed, but his wife reassured him he had become a prophet. Convinced of his superior status, Muhammad was intolerant of those who rejected him, assassinated those who criticized him, raided, looted, and massacred entire populations. He reduced thousands to slavery. He raped, and allowed his men to rape their female captives. All of this, he did

with a clear conscience and a sense of entitlement. He was magnanimous to those who admired him, but vengeful towards his detractors. He believed he was the most perfect human creation and that the universe was created because of him. Understanding Muhammad ventures beyond the stories. It unravels the mystique of the most influential, and yet the most enigmatic man in history. Muslims emulate their prophet. Only by understanding him can we know what makes them tick, and predict these most unpredictable people.

In this student-friendly text, Jones and Singh explore the phenomenon of language change, with a particular focus on the social contexts of its occurrence and possible motivations, including

speakers' intentions and attitudes. Presenting new or little-known data, the authors draw a distinction between "unconscious" and "deliberate" change. The discussion on "unconscious" change considers phenomena such as the emergence and obsolescence of individual languages, whilst the sections on "deliberate" change focus on issues of language planning, including the strategies of language revival and revitalization movements. There is also a detailed exploration of what is arguably the most extreme instance of "deliberate" change; language invention for real-world use.

Examining an extensive range of language situations, *Exploring Language Change* makes a clear, but often ignored distinction between concepts such as language policy and planning, and language revival and revitalization. Also featured are a number of case studies which demonstrate that real-life language use is often much more complex than theoretical abstractions might suggest. This is a key text for students on a variety of courses, including sociolinguistics, historical linguistics and language policy and planning.

Examination of the early literature attests to the fact that

the study of copolymerization was initiated when polymer science was in its infancy. It has continued to grow to a subject of major importance and has been a source of interest to both academic and industrialist alike. The wide spectrum of structures and properties available in the statistical copolymer has made this a fruitful field of exploration, but one particular and more restricted form which has held its own fascination for many is the limiting case of the strictly alternating copolymer. This is formed, in the ideal situation, when two monomers in a reaction mixture add consecutively to create a polymer chain with a regular {ABABAB} structure, irrespective of the monomer feed ratio. When this happens the resulting copolymer will always have

the same composition, a feature which can be advantageous but also somewhat restrictive, as the ability to vary the properties is then limited. Within a series entitled Speciality Polymers it seems appropriate then to deal with this subject, particularly as no previous attempt has been made to draw together the various facets of alternating copolymerization into one volume. It also seems timely to present a more unified picture of the subject which will also illustrate the progress made.
