How to Explain Climate Change to Your Child | Parents

To understand global warming, it helps to understand the greenhouse effect. A greenhouse is a glass house where plants grow. Glass lets light in and keeps heat from escaping. This trapped heat keeps the plants warm even when it is cold outside. Likewise, Earth's atmosphere traps energy from the Sun. Carbon dioxide and other gases—called greenhouse gases—in the air do this trapping.

global warming - Kids | Britannica Kids | Homework Help

This website provides an interactive guide to the issues of global warming and climate change, targeted to a middle school audience but accessible to the public at large. Learn the Basics See the Impacts

A Student's Guide to Global Climate Change | US EPA

Our world is always changing. Look out your window long enough, and you might see the weather change. Look even longer, and you'll see the seasons change. The Earth's climate is changing, too, but in ways that you can't easily see. The Earth is getting warmer because people are adding heat-trapping gases to the atmosphere, mainly by burning fossil fuels.

A kid's guide to global warming (Book, 2008) [WorldCat.org]

These human-produced temperature increases are commonly referred to as global warming. Natural processes can also contribute to climate change, including internal variability (e.g., cyclical ocean patterns like El Niño, La Niña and the Pacific Decadal Oscillation) and external forcings (e.g., volcanic activity, changes in the Sun's energy output, variations in Earth's orbit).

Global Warming For Kids | Effects Explained - YouTube

The rise of air temperatures near Earth 's surface over the past one to two centuries is known as global warming. Earth has experienced periods of gradual warming and cooling throughout its existence as a result of natural causes. Such natural causes have included volcanic eruptions and variations in the Sun's output.

global warming - Students | Britannica Kids | Homework Help

Modern global warming is the result of an increase in magnitude of the so-called greenhouse effect, a warming of Earth's surface and lower atmosphere caused by the presence of water vapour, carbon dioxide, methane, nitrous oxides, and other greenhouse gases.
