This book is based on an expert group meeting entitled 'Male Roles and Masculinities in the Perspective of a Culture of Peace', which was organised by UNESCO in Oslo, Norway in 1997, the first international discussion of the connections between men and masculinity and peace and war. The group consisted of researchers, activists, policy makers and administrators and the aim of the meeting was to formulate practical suggestions for change. Chapters in the book consist of both regional case studies and social science research on the connections of traditional masculinity and patriarchy to violence and peace building. The Culture of Peace initiatives in this book show how violence is ineffective, and the book contests the views in the socialisation of boy-children that aggressiveness, violence and force are an acceptable means of expression.

In 2003, for the first time since the Second World War, the United Kingdom took part in an invasion and full-scale occupation of a sovereign State. Saddam Hussein was undoubtedly a brutal dictator who had attacked Iraq's neighbours, repressed and killed many of his own people, and was in violation of obligations imposed by the UN Security Council. But the questions for the Inquiry were: whether it was right and necessary to invade Iraq in March 2003; and whether the UK could - and should - have been better prepared for what followed. The Inquiry concluded that the UK chose to join the invasion of Iraq before the peaceful options for disarmament had been exhausted. Military action at that time was not a last resort. They also concluded that the judgements about the severity of the threat posed by Iraq's weapons of mass destruction - WMD - were presented with a certainty that was not justified. Despite explicit warnings, the consequences of the invasion were underestimated. The planning and preparations for Iraq after Saddam Hussein were wholly inadequate. Military action in Iraq might have been necessary at some point but in March 2003 there was no imminent threat and the majority of the Security Council supported continuing UN inspections and monitoring. The Inquiry identified what lessons should be learned from experience in Iraq, including: the management of relations with allies, especially the US; the importance of collective Ministerial discussion which encourages frank and informed debate and challenge; the need to assess risks, weigh options and set an achievable and realistic strategy; the vital role of Ministerial leadership and co-ordination of action across Government, supported by senior officials; and the need to ensure that both the civilian and military arms of Government are properly equipped for their tasks

Now featuring gorgeous new cover art, this classic, powerfully emotional, award-winning novel is the perfect read to commemorate the 75th anniversary of the end of World War II. London is poised on the brink of World War II. Eight-year-old Willie Beech is evacuated to the English countryside and lands on Thomas Oakley's doorstep, timid and scarred from abuse. Mr. Tom, a gruff but kindly old man, is deeply moved for the boy, treating him with a gentleness he's forgotten he's even capable of. With Mr. Tom's help, Willie leaves behind his hateful past and learns to love a world he never knew existed, a world of friendship and affection and joy. But then a telegram comes, and Willie is ordered to return to London. When weeks pass without word from him, Mr. Tom sets out for London to once again rescue the boy he's come to love as a son. This heartwarming and much-honored classic is an excellent choice for independent or shared reading.

Why Not? After all, no-one had ever done it before. It would be one of the longest of all overland journeys - half way round the world, from the English Channel to Singapore. They knew that several expeditions had already tried it. Some had got as far as the deserts of Persia; a few had even reached the plains of India. But no one had managed to go on from there: over the jungle clad mountains of Assam and across northern Burma to Thailand and Malaya. Over the last 3,000 miles it seemed there were 'just too many rivers and too few roads'. But no-one really knew ... In fact, their problems began much earlier than that. As mere undergraduates, they had no money, no cars, nothing. But with a cool audacity, which was to become characteristic, they set to work - wheedling and cajoling. First, they coaxed the BBC to come up with some film for a possible TV series. They then gently persuaded the manufacturers to lend them two factory-fresh Land Rovers. A publisher was even sweet-talked into giving them an advance on a book. By the time they were ready to go, their sponsors (more than 80 of them) ranged from whiskey distillers to the makers of collapsible buckets. In late 1955, they set off. Seven months and 12,000 miles later, two very weary Land Rovers, escorted by police outriders, rolled into Singapore - to flash bulbs and champagne. Now, fifty years on, their book, 'First Overland', is republished - with a foreword by Sir David Attenborough. After all, it was he who gave them that film.

How was American culture disseminated into Britain? Why did many British citizens embrace American customs? And what picture did they form of American society and politics? This engaging and wide-ranging history explores these and other questions about the U.S.'s cultural and political influence on British society in the post-World War II period.

Nominated for the FT/McKinsey Business Book of the Year Nominated for the Carnegie Medal for Excellence in Nonfiction Amazon Top 5 Business Books of 2017 'A prodigious feat of reporting' - Malcolm Gladwell 'Black Edge has the grip of a thriller ... Everyone should read this book' - David Grann, New York Times bestselling author of THE LOST CITY OF Z How do super-rich bankers get away with it? There is a powerful new class of billionaire financiers in the world, who use their phenomenal wealth to write their own rules and laws. Chief among them is Steven Cohen, a Wall Street legend, and the basis for Damian Lewis's character in BILLIONS, who built his hedge fund into a \$15 billion empire on the basis of wizard-like stock trading, and who flies to work by helicopter and owns one of the largest private art collections in the world. But his iconic status was shattered when his fund became the target of a sprawling FBI investigation into insider trading, charged with using illegal inside information - or 'black edge' - to beat the market. His firm, SAC Capital, was ultimately indicted and pled guilty to charges of securities and wire fraud, and paid record criminal and civil fines of nearly \$2 billion. But even as the company bearing his name pled guilty, Cohen himself was never charged, and is free to start trading publicly again from January 2018. Black Edge offers a revelatory look at the grey zone in which so much of Wall Street functions, and a window into the transformation of the worldwide economy. With meticulous reporting and powerful storytelling, this is a riveting, true-life legal thriller that takes readers inside the US government's pursuit of Cohen and his employees, and raises urgent questions about the power and wealth of those who sit at the pinnacle of the financial world.

****A Library Journal Best Book of 2015 ** **A Christian Science Monitor Top Ten Book of September**** In a world dominated by people and rapid climate change, species large and small are increasingly vulnerable to extinction. In *Resurrection Science*, journalist M. R. O'Connor explores the extreme measures scientists are taking to try and save them, from captive breeding and genetic management to de-extinction. Paradoxically, the more we intervene to save species, the less wild they often become. In stories of sixteenth-century galleon excavations, panther-tracking in Florida swamps, ancient African rainforests, Neanderthal tool-making, and cryogenic DNA banks, O'Connor investigates the philosophical questions of an age in which we "play god" with earth's biodiversity. Each chapter in this beautifully written book focuses on a unique species--from the charismatic northern white rhinoceros to the infamous passenger pigeon--and the people entwined in the animals' fates. Incorporating natural history and evolutionary biology with conversations with eminent ethicists, O'Connor's narrative goes to the heart of the human enterprise: What should we preserve of wilderness as we hurtle toward a future in which technology is present in nearly every aspect of our lives? How can we co-exist with species when our existence and their survival appear to be pitted against one another?

A tour through the new science of the Omniverse, its spiritual and physical dimensions, and its incalculable intelligent civilizations • Reveals the key travel and communication technologies of the Omniverse: time travel, teleportation, and telepathy • Unveils newly disclosed state secrets about these technologies, about the findings of the NASA Mars rover missions, and about a secret colony and life on Mars • Explains through science how souls are holographic fragments of God and how they help create planets, solar systems, galaxies, and universes in the multiverse We are all citizens of the Omniverse, the overarching matrix of energy, spirit, and intelligence that encompasses all that exists: all universes within the multiverse as well as the spiritual dimensions centered on the divine Source that many call God. In this scientific guide to the Omniverse, Alfred Lambremont Webre reveals startling replicable evidence about extraterrestrial and extra-universal life, the intelligent civilizations created by souls in the afterlife, top-secret alien technology, and the existence of a secret base as well as life on Mars. The author explains how our souls are holographic fragments of God/Source and how souls and Source are co-creating planets and galaxies as virtual realities for soul development. He addresses Grey alien control over soul reincarnation and also sheds light on the presence of invisible hyperdimensional controllers known as the Archons, who feed off negative energy. Revealing the key technologies of the Omniverse, the author explains how hyperdimensional civilizations communicate telepathically, teleport interdimensionally, and travel through time. He unveils newly disclosed state secrets about government possession of these technologies, the findings of the NASA Mars rover missions, and the secret Mars colony whose permanent security personnel is age-reversed and shot back through time to their specific space-time origin points--with their memories blocked. Integrating science and spirituality, this map of the dimensions of the Omniverse sounds the call for scientific inquiry into the holographic origins of the soul, the potential of time travel, and our role as divine co-creators with Source.

I was only sixteen when I bought an electric guitar and joined a band. A year later, I formed an all-girl band called the Marine Girls and played gigs, and signed to an indie label, and started releasing records. Then, for eighteen years, between 1982 and 2000, I was one half of the group Everything But the Girl. In that time, we released nine albums and sold nine million records. We went on countless tours, had hit singles and flop singles, were reviewed and interviewed to within an inch of our lives. I've been in the charts, out of them, back in. I've seen myself described as an indie darling, a middle-of-the-road nobody and a disco diva. I haven't always fitted in, you see, and that's made me face up to the realities of a pop career - there are thrills and wonders to be experienced, yes, but also moments of doubt, mistakes, violent lifestyle changes from luxury to squalor and back again, sometimes within minutes.

Notwithstanding the importance of modern technology, fieldwork remains vital, not least through helping to inspire and educate the next generation. Fieldwork has the ingredients of intellectual curiosity, passion, rigour and engagement with the outdoor world - to name just a few. You may be simply noting what you see around you, making detailed records, or carrying out an experiment; all of this and much more amounts to fieldwork. Being curious, you think about the world around you, and through patient observation develop and test ideas. Forty contributors capture the excitement and importance of fieldwork through a wide variety of examples, from urban graffiti to the Great Barrier Reef. Outdoor learning is for life: people have the greatest respect and care for their world when they have first-hand experience of it.

One of Thomas Hardy's most powerful works, *The Return of the Native* centers famously on Egdon Heath, the wild, haunted Wessex moor that D. H. Lawrence called 'the tragedy.' The heath's changing face mirrors the fortunes of the farmers, inn-keepers, sons, mothers, and lovers who populate the novel. The 'native' is Clym Yeobright, home from a cosmopolitan life in Paris. He; his cousin Thomasin; her fiancé, Damon Wildeve; and the willful Eustacia Vye are the protagonists in a tale of doomed love, alienation, and melancholy as Hardy brilliantly explores that theme so familiar throughout his fiction: the diabolical role of chance in determining the course of a life.

Inside the Curiosity Mission

The Greatest Scientific Detective Story of All Time

With a focus of the Perseverance rover mission, the "Quintessential account of one of humanity's most intriguing quests" (Pail Halpern, Medium), "A remarkable, timely, and up-to-date account of Mars exploration" (Leonard David, "Space Insider," Space.com). From *The War of the Worlds* to *The Martian* and to the amazing photographs sent back by the robotic rovers Curiosity and

Opportunity, Mars has excited our imaginations as the most likely other habitat for life in the solar system. Now the Red Planet is coming under scrutiny as never before. As new missions are scheduled to launch this year from the United States and China, and with the European Space Agency's ExoMars mission now scheduled for 2022, this book recounts in full the greatest scientific detective story ever. For the first time in forty years, the missions heading to Mars will look for signs of ancient life on the world next door. It is the latest chapter in an age-old quest that encompasses myth, false starts, red herrings, and bizarre coincidences—as well as triumphs and heartbreaking failures. This book, by two journalists with deep experience covering space exploration, is the definitive story of how life's discovery has eluded us to date, and how it will be found somewhere and sometime this century. The Search for Life on Mars is based on more than a hundred interviews with experts at NASA's Jet Propulsion Laboratory and elsewhere, who share their insights and stories. While it looks back to the early Mars missions such as Viking 1 and 2, the book's focus is on the experiments and revelations from the most recent ones—including Curiosity, which continues to explore potentially habitable sites where water was once present, and the Mars Insight lander, which has recorded more than 450 marsquakes since its deployment in late 2018—as well as on the Perseverance and ExoMars rover missions ahead. And the book looks forward to the newest, most exciting frontier of all: the day, not too far away, when humans will land, make the Red Planet their home, and look for life directly.

A Reading Course in Homeric Greek, Book One, Third Edition is a revised edition of the well respected text by Frs. Schoder and Horrigan. Honor work, appendices, and vocabularies are included, along with review exercises for each chapter with answers.

This book provides a comprehensive theory of almost periodic type functions with a large number of the applications to differential equations, functional equations and evolution equations. In addition, it also presents a basic theory on ergodicity and its applications in the theory of function spectrum, semi group of bounded linear operators and dynamical systems. It reflects new establishment of recent years in the field. This monograph is self-contained, the only prerequisite being a basic knowledge of functional analysis and ordinary differential equations. It is written for the mathematicians who wish to learn about the subject and is of interest to the specialists in the areas of abstract harmonic analysis, functional analysis, differential (functional) equations, dynamical system and ergodicity. It is also suitable as a textbook for graduates in Mathematical Analysis.

A beautiful debut novel set in the Outer Hebrides, *The House Between Tides* strips back layers of the past to reveal a dark mystery. In the present day, Hetty Deveraux returns to the family home of Muirlan House on a remote Hebridean island estate following the untimely death of her parents. Torn between selling the house and turning it into a hotel, Hetty undertakes urgent repairs, accidentally uncovering human remains. Who has been lying beneath the floorboards for a century? Were they murdered? Through diaries and letters she finds, Hetty discovers that the house was occupied at the turn of the century by distant relative Beatrice Blake, a young aristocratic woman recently married to renowned naturalist and painter, Theodore Blake. With socialist and suffragist leanings Beatrice is soon in conflict with her autocratic new husband, who is distant, and wrapped up in Cameron, a young man from the island. As Beatrice is also drawn to Cameron, life for them becomes dangerous, sparking a chain of events that will change many lives, leaving Hetty to assemble the jigsaw of clues piece by piece one hundred years later, as she obsessively chases the truth. In *The House Between Tides*, author Sarah Maine uses her skills as a storyteller to create an utterly compelling historical mystery set in a haunting and beautifully evoked location. 'Last night, debut author Maine dreamed of a contemporary spin on classic Gothic tropes. Orphan Hetty Deveraux has inherited a crumbling, wind-battered mansion on a remote Muirlan Island in western Scotland, "on the edge of the world." The day she arrives to inspect her new property, however, local assessor James Cameron has found a skeleton beneath the floorboards. Who is it, and how long has it been there? Abandoned since the war, the house was the refuge of Theo Blake, a Turner-esque painter-turned-mad recluse and a distant relative of Hetty's. At loose ends since the deaths of her parents, Hetty hopes restoring the house will serve as a new beginning. Meanwhile, in 1910, Theo Blake brings his new bride to Muirlan House, whose landscapes have inspired some of his most famous paintings. Maine skillfully balances a Daphne du Maurier atmosphere with a Barbara Vine-like psychological mystery as she guides the reader back and forth on these storylines. The two narrative threads are united by the theme of conservation versus exploitation: Muirlan is a habitat for several species of rare birds, threatened in the 1910 plot by Blake's determination to kill and mount them for his collection and in the 2010 story by Hetty's half-formed plans to transform Muirlan House into a luxury hotel. Local man Cameron wants to see the island preserved as "a precious place, wild and unspoiled, a sanctuary for more than just the birds." The setting emerges as the strongest personality in this compelling story, evoking passion in the characters as fierce as the storms which always lurk on the horizon. A debut historical thriller which deftly blends classic suspense with modern themes.' Kirkus 'Muirlan Island in Scotland's Outer Hebrides provides the sensuous setting for British author Maine's impressive debut, which charts the parallel quests of two women a century apart. [...] Vivid descriptions of the island's landscape and weather enhance this beautifully crafted novel.' Publisher's Weekly 'There is an echo of Daphne du Maurier's *Rebecca* in Sarah Maine's appealing debut novel, when human remains are found beneath the floorboards of a derelict mansion on a Scottish island... a highly readable debut.' Independent 'A tremendous accomplishment. So assured, so well-judged, and with such an involving story to tell, this might be the author's fifth or sixth novel, not her first. A literary star is born!' Ronald Frame, author of *The Lantern Bearers* and *Havisham*

'A brilliant, authoritative, surprising, captivating introduction to human genetics. You'll be spellbound' Brian Cox *This is a story about you. It is the history of who you are and how you came to be. It is unique to you, as it is to each of the 100 billion modern humans who have ever drawn breath. But it is also our collective story, because in every one of our genomes we each carry the history of our species - births, deaths, disease, war, famine, migration and a lot of sex. In this captivating journey through the expanding landscape of genetics, Adam Rutherford reveals what our genes now tell us about human history, and what history can now tell us about our genes. From Neanderthals to murder, from redheads to race, dead kings to plague, evolution to epigenetics, this is a demystifying and illuminating new portrait of who we are and how we came to be. *** 'A thoroughly entertaining history of Homo sapiens and its DNA in a manner that displays popular science writing at its best'* Observer *'Magisterial, informative and delightful'* Peter Frankopan *'An extraordinary adventure...From the Neanderthals to the Vikings, from the Queen of Sheba to Richard III, Rutherford goes in search of our ancestors, tracing the genetic clues deep into the past'* Alice Roberts

James Joyce's near blindness, his peculiar gait, and his death from perforated ulcers are commonplace knowledge to most of his readers. But until now, most Joyce scholars have not recognized that these symptoms point to a diagnosis of syphilis. Kathleen Ferris traces Joyce's medical history as described in his correspondence, in the diaries of his brother Stanislaus, and in the memoirs of his acquaintances, to show that many of his symptoms match those of tabes dorsalis, a form of neurosyphilis which, untreated, eventually leads to paralysis. Combining literary analysis and medical detection, Ferris builds a convincing case that this dread disease is the subject of much of Joyce's autobiographical writing. Many of his characters, most notably Stephen Dedalus and Leopold Bloom, exhibit the same symptoms as their creator: stiffness of gait, digestive problems, hallucinations, and impaired vision. Ferris also demonstrates that the themes of sin, guilt, and retribution so prevalent in Joyce's works are almost certainly a consequence of his having contracted venereal disease as a young man while frequenting the brothels of Dublin and Paris. By tracing the images, puns, and metaphors in Ulysses and Finnegans Wake, and by demonstrating their relationship to Joyce's experiences, Ferris shows the extent to which, for Joyce, art did indeed mirror life.

Drawing on 15 months of ethnographic research in one of the most under-developed regions in the Caribbean island of Trinidad, this book describes the uses and consequences of social media for its residents. Jolynna Sinanan argues that this semi-urban town is a place in-between: somewhere city dwellers look down on and villagers look up to. The complex identity of the town is expressed through uses of social media, with significant results for understanding social media more generally. Not elevating oneself above others is one of the core values of the town, and social media becomes a tool for social visibility; that is, the process of how social norms come to be and how they are negotiated. Carnival logic and high-impact visuality is pervasive in uses of social media, even if Carnival is not embraced by all Trinidadians in the town and results in presenting oneself and association with different groups in varying ways. The study also has surprising results in how residents are explicitly non-activist and align themselves with everyday values of maintaining good relationships in a small town, rather than espousing more worldly or cosmopolitan values.

"A perfect antidote to the hyper-vigilant, extra-electrified, standardized-tested, house-arrested, 21st-century childhood." —Richard Louv, bestselling author of Last Child in the Woods and Vitamin N Bringing Up Bébé meets Last Child in the Woods in this lively, insightful memoir about a mother who sets out to discover if the nature-centric parenting philosophy of her native Scandinavia holds the key to healthier, happier lives for her American children. When Swedish-born Linda McGurk moved to small-town Indiana with her American husband to start a family, she quickly realized that her outdoorsy ways were not the norm. In Sweden children play outside all year round, regardless of the weather, and letting young babies nap outside in freezing temperatures is not only common—it is a practice recommended by physicians. In the US, on the other hand, she found that the playgrounds, which she had expected to find teeming with

children, were mostly deserted. In preschool, children were getting drilled to learn academic skills, while their Scandinavian counterparts were climbing trees, catching frogs, and learning how to compost. Worse, she realized that giving her daughters the same freedom to play outside that she had enjoyed as a child in Sweden could quickly lead to a visit by Child Protective Services. The brewing culture clash finally came to a head when McGurk was fined for letting her children play in a local creek, setting off an online firestorm when she expressed her anger and confusion on her blog. The rules and parenting philosophies of her native country and her adopted homeland were worlds apart. Struggling to fit in and to decide what was best for her children, McGurk turned to her own childhood for answers. Could the Scandinavian philosophy of “there is no such thing as bad weather, only bad clothes” be the key to better lives for her American children? And how would her children’s relationships with nature change by introducing them to Scandinavian concepts like friluftsliv (“open-air living”) and hygge (the coziness and the simple pleasures of home)? McGurk embarked on a six-month-long journey to Sweden to find out. There’s No Such Thing as Bad Weather is a fascinating personal narrative that highlights the importance of spending time outdoors, and illustrates how the Scandinavian culture could hold the key to raising healthier, resilient, and confident children in America.

Revealed to the world in 1948, the Land-Rover not only revived the Rover Company's fortunes in an austerity-riddled post-war period, but galvanized its future, thanks to the model's almost immediate success. With the manufacture of an initial 48 'pre-production' examples coming to a close, the first official production models were assembled - starting with chassis 860001. As original factory records prove, this pivotal vehicle was destined for His Royal Highness King George VI, but the decision was made to postpone the presentation and instead, 'number one' was retained by the factory until 1950, when it was registered JUE 477 before leaving Rover Company ownership. After decades left out in the cold and exposed to the elements, 860001 had certainly seen better days, but thanks to the determination of Sir Jim Ratcliffe, founder and Chairman of INEOS, the future of JUE 477 was secured in 2017. Over the next two years, a dedicated team of experts, led by chief restorer, Julian Shoolheifer set about restoring the vehicle while retaining as much of its original DNA as was physically, and safely, possible and making sure that this remarkable vehicle's history and past life was still worn with pride.

Detailed guidance to assembly, maintenance, etc. of all components. Includes five main bearing engine supplement.

Rare photography and stunning artworks illustrate the history of NASA’s Space Shuttle program from 1981 to 2011, providing an unprecedented look at the missions, equipment, and astronauts.

A Scandinavian Mom’s Secrets for Raising Healthy, Resilient, and Confident Kids (from Friluftsliv to Hygge)

From the instant #1 New York Times bestselling author of the “eerie and fascinating” (USA TODAY) The Thirteenth Tale comes a “swift and entrancing,

profound and beautiful” (Madeline Miller, internationally bestselling author of Circe) novel about how we explain the world to ourselves, ourselves to others, and the meaning of our lives in a universe that remains impenetrably mysterious. On a dark midwinter’s night in an ancient inn on the river Thames, an extraordinary event takes place. The regulars are telling stories to while away the dark hours, when the door bursts open on a grievously wounded stranger. In his arms is the lifeless body of a small child. Hours later, the girl stirs, takes a breath and returns to life. Is it a miracle? Is it magic? Or can science provide an explanation? These questions have many answers, some of them quite dark indeed. Those who dwell on the river bank apply all their ingenuity to solving the puzzle of the girl who died and lived again, yet as the days pass the mystery only deepens. The child herself is mute and unable to answer the essential questions: Who is she? Where did she come from? And to whom does she belong? But answers proliferate nonetheless. Three families are keen to claim her. A wealthy young mother knows the girl is her kidnapped daughter, missing for two years. A farming family reeling from the discovery of their son’s secret liaison stand ready to welcome their granddaughter. The parson’s housekeeper, humble and isolated, sees in the child the image of her younger sister. But the return of a lost child is not without complications and no matter how heartbreaking the past losses, no matter how precious the child herself, this girl cannot be everyone’s. Each family has mysteries of its own, and many secrets must be revealed before the girl’s identity can be known. Once Upon a River is a glorious tapestry of a book that combines folklore and science, magic and myth. Stedman, #1 New York Times bestselling author of The Light Between Oceans).

Featuring previously unpublished landscape photographs and complemented by a downloadable app, a detailed reference written in consultation with NASA scientists documents the ambitious space expedition through inside stories, accessible science and theories about the future of space exploration.
