*Has the future a future? Are we bringing history to an end? Observing any one of several individual but critical trends suggests that, without rapid and positive action, history may have only a very short way to run. Whether it is the growth of world population, of greenhouse gas concentrations and the accelerating rate of climate change, the running down of oil and natural gas reserves,*

This report is intended to stimulate thinking about the rapid and vast geopolitical changes characterizing the world today and possible global trajectories over the next 15 years. As with the NIC's previous Global Trends reports, we do not seek to predict the future, which would be an impossible feat, but instead provide a framework for thinking about possible futures and their implications. In-depth research, detailed modeling and a variety of analytical tools drawn from public, private and academic sources were employed in the production of Global Trends 2030. NIC leadership engaged with experts in nearly 20 countries, from think tanks, banks, government offices and business groups, to solicit reviews of the report.

The Future of Nursing explores how nurses' roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the

greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles -- including limits on nurses' scope of practice -- should be removed so that the health system can

meltdown: an inability to fund the growth in demand and the appearance of costly new medical technology within the current healthcare systems framework. This 'meltdown' will not be as sudden as that in the world of finance: it will occur over the next 20 years, but the failure of the current sources of healthcare funding to meet our expectations of care quantity and quality will have consequences every bit as serious as the banking crisis. The warning signs are there, the crisis is already being predicted - but is it inevitable, or can it be avoided? This book offers a penetrating analysis of the underlying

problems, and offers some simple, but far-reaching solutions to bring supply and demand back into balance and avoid the meltdown. It is not a contribution to the current political debate but a primer for the changes to the underlying fabric of healthcare if reforms such as "Obamacare" have any chance of sustainable success. In the course of the book, we confront many topical challenges: How can people be persuaded to manage their own health better?; Can we afford to spend more of today's money on disease prevention and detection, to save future costs?; Will 'personalised medicine' be

cheaper, or more expensive?; Are healthcare IT systems a key part of the solution or doomed to be expensive white elephants?; and most importantly: What will the future of healthcare look like, for us and for our children and grandchildren? To bring the answers to this final question alive, the book uses a fictitious family, the Carters, to illustrate the changes we will see, the dilemmas we will face and the solutions we must strive for. Interspersed between the text are the vignettes of members of the family, their diseases and treatments and how change has affected each of their lives.

This insightful management book introduces an inspirational new ethics-oriented approach to business and leadership for current and future leaders. It argues that the challenges of today's global era require a new, more holistic and ethical leadership approach than conventional concepts suggest. A framework for the concept of "inclusive leadership" is developed by linking leadership challenges and tasks to the transforming world. Based on over thirty years professional

experience in various sectors of society and in both executive and advisory roles in business, the author offers practical suggestions on how to apply inclusive leadership in day-to-day activities. The book also emphasizes how ethics and virtues should influence and shape leadership, a link that is often absent in conventional leadership literature. Building a bridge between theory and practice, this book offers both practical and academic perspectives, with the ideas and concepts illustrated with many real-life examples.

the auspices of the National Academies of Sciences, Engineering, and Medicine conducted a study aimed at envisioning and charting a path forward for the nursing profession to help reduce inequities in people's ability to achieve their full health potential. The ultimate goal is the achievement of health equity in the United States built on strengthened nursing capacity and expertise. By leveraging these attributes, nursing will help to create and contribute comprehensively to equitable public health and health care systems that are designed to work for everyone. In conversations with people all over the world, from government officials and business leaders to taxi drivers and schoolteachers, Blair Sheppard, global leader for strategy and leadership at PricewaterhouseCoopers, discovered they all had surprisingly similar concerns. In this prescient and pragmatic book, he and his team sum up these concerns in what they call the ADAPT framework: Asymmetry of wealth; Disruption wrought by the unexpected and often problematic consequences of technology; Age disparities—stresses caused by very young or very old populations in developed and emerging countries; Populism as a symptom of the

breakdown in global and national consensus; and loss of Trust in the institutions that underpin and stabilize society. These concerns are in turn precipitating four crises: a crisis of prosperity, a crisis of technology, a crisis of institutional legitimacy, and a crisis of leadership. Sheppard and his team analyze the complex roots of these crises—but they also offer solutions, all often seemingly counterintuitive ones. For example, in an era of globalization, we need to place a much greater emphasis on developing self-sustaining local economies. And as technology permeates our lives, we need computer scientists and engineers conversant with

benefits of physical activity, societies that are more active can generate additional returns on investment including a reduced use of fossil fuels, cleaner air and less congested, safer roads. These outcomes are interconnected with achieving the shared goals, political priorities and ambition of the Sustainable Development Agenda 2030. The new WHO global action plan to promote physical activity responds to the requests by countries for updated guidance, and a framework of effective and feasible policy actions to increase physical activity at all levels. It also responds to requests for global leadership and stronger regional and national
