Get Free Linear Feedback Controls By Mark A Haidekker

Feedback controls are control systems where a sensor monitors the property of the system to be controlled, such as motor speed, pressure, position, voltage, or temperature. Common to all feedback control systems is the comparison of the sensor signal to a reference signal, and the existence of a controller that influences the system to minimize the deviation between the sensor and reference signals.

for example, can have dozens of feedback control systems.

Amazon.com: Linear Feedback Controls: The Essentials

...

The design of control systems is at the very core of engineering. Feedback controls are ubiquitous, ranging from simple room thermostats to airplane engine control. Helping to make sense of this wide-ranging field, this book provides a new approach by keeping a tight focus on the essentials with a limited, yet consistent set of examples.
