This book is concerned with bilingual thematic dictionaries (BTDs). The three chief aims of the research project are: 1) to identify the characteristic features of the bilingual thematic dictionary, 2) to gauge its usefulness, and 3) to make suggestions as to how it could be improved. Various approaches are adopted in order to reveal the nature of the BTD. The typological approach considers the lexicographic genres (bilingual, thematic, and pedagogical) which have been combined to create this hybrid reference work. Particular attention is paid to the BTD's immediate forerunner and closest lexicographic relative: the monolingual thematic learner's dictionary. Detailed textual analyses of contemporary thematic dictionaries identify the characteristic features of the macrostructure, microstructure, and other components from a structural perspective. In order to evaluate the usefulness of the BTD features identified, the textual analyses are supplemented by three pieces of user research involving a questionnaire (to elicit

learners' opinions), a test (on the effectiveness of the access structure), and an experiment (to discover how a learner uses a BTD).

The illustrations have been completely updated in a more realistic style that is visually appealing to adult learners. The second edition also contains two new features: Introductory Pages and Story Pages. The Introductory Pages have been added to the beginning of each theme to give lower-level students a basic overview of key vocabulary words, and to give a starting point for discussion and an introduction to the theme for more advanced students. The Story Pages consist of a two-page spread at the end of each theme to help students use the words in context and practise their reading skills. The area of cognitive processing of Chinese and Japanese is currently attracting a great deal of attention by leading cognitive psychologists. They aim to find out the similarities and differences in processing the morphosyllabic Chinese and Japanese syllabary as compared with alphabetic language systems. Topics under the processing of Chinese include: the use of phonological codes in visual identification of Chinese words, the constraint on such phonological activation, recognition of Chinese homophones, Chinese sentence comprehension and children's errors in writing Chinese characters. Topics under the processing of Japanese include: the automatic recognition of kanji within an interactive-activation framework, On-reading and Kun-reading of kanji characters, processing differences between hiragana and kanji, the effect of polysemy on katakana script, and the writing behavior of Japanese and

non-Japanese speakers. The interactive-activation model provides the phonologic-orthographic links in processing both language systems. The present volume should add greatly to our understanding of this topic. Many of the contributors are internationally known for their experimental psychological work.

In Chinese classrooms where he taught English, he conducted active research, experimenting and taking student polls. He concentrated on eliminating speech impediments and strong accents. His education, experiences, and research shaped his philosophy of teaching English as a Second Language and formed the basis of his first ESL book, A Manual for Teaching English in China. Following the manual is Secrets to Better English which reveals a proven method of teaching ESL without accent. Although Burkett's doctorate is in philosophy, his love is making a difference in his students' lives by teaching diction and the skills of speech.

Technology has revolutionized the field of translation, bringing drastic changes to the way translation is studied and done. To an average user, technology is simply about clicking buttons and storing data. What we need to do is to look beyond a system's interface to see what is at work and what should be done to make it work more efficiently. This book is both macroscopic and microscopic in approach: macroscopic as it adopts a holistic orientation when outlining the development of translation technology in the last forty years, organizing concepts in a coherent and logical way with a theoretical framework, and predicting what is to come in the years ahead; microscopic as it examines in detail the five stages of technology-oriented translation procedure and the strengths and weaknesses of the free and paid systems available to

users. The Future of Translation Technology studies, among other issues: The Development of Translation Technology Major Concepts in Computer-aided Translation Functions in Computer-aided Translation Systems A Theoretical Framework for Computer-Aided Translation Studies The Future of Translation Technology This book is an essential read for scholars and researchers of translational studies and computational linguistics, and a guide to system users and professionals.
