working in the fields of
plasma chemistry has
used H. Yasuda's book on
" Plasma Polymerization
" published in 1985 as a
standard work. Main
content, besides some
considerations on
gas-phase reaction in
general, are kinetic and
mechanistic aspects of
plasma polymerization.

Dispelling previous
misconceptions and
revealing new areas for
investigation, Magneto
Luminous Chemical Vapor
Deposition describes the

key process of dielectric breakdown of gas molecules under the influence of a magnetic field. It emphasizes behavioral distinctions between molecular gasses that cause plasma polymerization (such as methane and trimethylsilane) and mono-atomic gases (e.g., helium and argon) when dealing with the dielectric breakdown of the gas phase under low pressure.
