*This example describes a MATLAB® implementation of OFDM synchronization, based upon the IEEE 802.11a standard [ 3]. Introduction. The IEEE 802.11a standard describes the transmission of an OFDM modulated signal for information exchange between systems in local and metropolitan area networks. This example utilizes the physical layer outlined by that standard, specifically the preamble symbols and the OFDM grid structure.*

*MATLAB Coder. View MATLAB Command. This example shows a method for digital communication with OFDM synchronization based upon the IEEE® 802.11a™ standard. System objects™ from the Communications Toolbox are utilized to provide OFDM modulation and demodulation and help synchronization functionality. In particular, this example illustrates methods to address real-world wireless communication issues like carrier frequency recovery, timing recovery, and frequency domain equalization.*
