Mechanical Measurements. The science of measurement is known as metrology. Measurement is done to know whether the component which has been manufactured is as per the requirements or not. Measurements will be of mainly length, mass, time, angle, temperature, squareness, roundness, roughness, parallelism etc.

Mechanical Measurement and Quality Control gives students a solid foundation of knowledge and skill in performing measurements and calculations. Students learn to use precision measurement tools, such as steel rule, tape measure, protractor, micrometer, height gauge, various calipers and dial indicators. Students learn how to collect data on a sample and calculate the mean, median and standard deviation.

In mechanical measurements, there is no specific value for readings which should be expected. There is no exact temperature to be expected in every bearing or a particular value of vibration in a steel frame that should be measured. Instead, mechanical measurements rely on the long-term recording, or logging, of values.
