## ~~Mechanical Seals Technical Manual~~ ~~-Fluitem~~

Mechanical seals are used in centrifugal pumps to keep water or any liquid from making contact with the delicate parts of the machine. They are situated on the shaft of the motor. Regular maintenance of these seals is needed to ensure there are no leaks. This article teaches you how to replace the mechanical seal.

The mechanical seals, sealing housing, the shaft or shaft sleeve must be cleaned before installation and inside the auxiliary seal (elastomers), machinery oil or Vaseline should be used for greasing. Some of the auxiliary seal, such as EPDM (which should not have direct contact with grease) should be greased by liquid soap or other detergents that will not react with the rubber.
