monitoring and preventing infections in the health care environment.

Preventing infections requires the ability to detect them when they occur, which is why the clinical microbiology laboratory (CML) plays a key role in HAI prevention.

## Clinical Microbiology and Infection Prevention

Infection control is implemented to prevent the spread of infections within hospitals and other healthcare settings. Infection control policies centre on preventing transfer of infections from patient-to-patient, patients-to-staff and staff-to-patients. The infection control toolkit includes hand hygiene, Personal Protective Equipment (PPE), isolation of patients, environmental cleaning and
