Modeling and Control of an Electromechanical Disk Brake 980600. In the scope of a research collaboration, IIT Automotive Europe and Darmstadt University of Technology are developing control strategies for a low-cost Brake-by-Wire system. However, since there is a wide range of variation in the efficiency of the gear units used in ...

Modeling and Control of an Electromechanical Disk Brake

This paper proposes a microelectric power grid that includes wind and fuel cell power generation units, as well as a water electrolyzer for producing hydrogen gas. The grid is loaded by an induction motor (IM) as a dynamic load and constant impedance load. An optimal control algorithm using the Mine Blast Algorithm (MBA) is designed to improve the performance of the proposed renewable energy ...

Modeling, Management, and Control of an Autonomous Wind ...

The coronavirus disease 2019 (COVID-19) is rapidly spreading in China and more than 30 countries over last two months. COVID-19 has multiple characteristics distinct from other infectious diseases, including high infectivity during incubation, time delay between real dynamics and daily observed number of confirmed cases, and the intervention effects of implemented quarantine and control measures.

Modeling the epidemic dynamics and control of COVID-19 ...

The control variables and minimize the optimal control model subject to the objective functional defined as where is the final time, and are weight constants of the exposed and corrupted population, respectively, while and are weight coefficients for each individual control measure.

Willy Wojsznis presented a paper on Wireless Model Predictive Control Applied for Dividing Wall Column Control at the Second International Conference on Event-Based Control, Communication and Signal Processing, EBCCSP2016. This paper was co-authored by me and Mark Nixon and Bailee Roach, University of Texas at Austin.

Modeling and Control + Dynamic World of Process Control

A feedback control strategy based on an internal model (IM) control system for non-linear plants that uses ANNs is presented in Ref. . This control system uses two neural networks: The IM, which approximates the plant forward dynamics and a controller, which gives the appropriate control input.

This is the fifth edition of a textbook originally titled system Dynamics: A Unified Approach, which in subsequent editions acquired the title System Dynamics: Modeling and Simulation of Mechatronic Systems. As you can see, the subtitle has now expanded to be Modeling, Simulation, and Control of Mechatronic Systems. The addition of the term control indicates [...]

This model is computationally very fast and takes only 0.75 s to simulate 1 charge-discharge cycle, and hence is useful for on-line monitoring and control. A model predictive controller which seeks to identify an optimal trade-off between charging time and battery life is also proposed.

Modeling and Control of Power Electronics Systems

In this reviewer's opinion, the book Modeling, Identification and Control of Robots is a welcome addition to these books. The book is primarily a mathematical treatise that unfolds logically and covers a wide range of accepted topics in robotics. It is less of a reference for those seeking information about robotic applications.

No other publication covers the three fundamental issues of robotics: modelling, identification and control. It covers the development of various mathematical models required for the control and simulation of robots. Show less. Written by two of Europe's leading robotics experts, this book provides the tools for a unified approach to the modelling of robotic manipulators, whatever their mechanical structure.

Based on years of experience, the authors reveal in New Directions in Bioprocess Modeling and Control that significant improvements can result from the process knowledge and insight that are gained when building experimental and first-principle models for process monitoring and control. Doing modeling in the process development and early commercialization phases is advantageous because it increases process efficiency and provides ongoing opportunities for improving process control.
