Robust blind watermarking has become a vital means of copyright protection, and this paper presents a new optimal robust and blind watermarking method of grayscale images based on intertwining logistic map and a variant of particle swarm optimization (PSO) in a hybrid domain. In the proposed approach, firstly a host image is decomposed by discrete wavelet transform, and discrete cosine ...

Multi-dimensional particle swarm optimization for robust ...

Multidimensional Particle Swarm Optimization (MD-PSO) and Fractional Global Best Formation (FGBF) are extensions of the basic PSO. MD-PSO allows searching for an optimum also when the solution dimensionality is unknown. With a dedicated dimensional PSO process, MD-PSO can search for optimal solution dimensionality.

Multidimensional Particle Swarm Optimization for Machine ...

This algorithm, the so-called Fractional Global Best Formation (FGBF), collects the best dimensional components from each swarm particle and fractionally creates the aGB, which will replace gbest as a guide for the swarm, if it turns out to be better than the swarm's native gbest particle. We then propose a novel multi-swarm algorithm, which combines multi-swarms with the FGBF technique so that each swarm can apply FGBF distinctively.

Traditional particle swarm optimization (PSO) algorithm mainly relies on the history optimal information to guide its optimization. However, when the traditional PSO algorithm searches high-dimensional complex problems, wrong position information of the best particles can easily cause the most of the particles move toward wrong space, so the traditional PSO algorithm is easily trapped into ...

Particle swarm optimization (PSO) is a popular SI algorithm used to solve the global optimization in continuous search space (Banks et al., 2007, Banks et al., 2008, Kennedy and Eberhart, 1995, Valle et al., 2008). It has an intelligent search mechanism inspired from the social behavior of bird flocking and fish schooling in searching for food ...

In this paper, a new efficient surrogate-assisted particle swarm optimization algorithm is proposed to further improve the optimization efficiency for high-dimensional expensive problems. The proposed algorithm can efficiently use the optimum information provided by the global and local surrogates to guide PSO to search in a relatively accurate and efficient manner.

Abstract: With a global search mechanism, particle swarm optimization (PSO) has shown promise in feature selection (FS). However, most of the current PSO-based FS methods use a fix-length representation, which is inflexible and limits the performance of PSO for FS.

Variable-Length Particle Swarm Optimization for Feature ...

In this paper, we proposed a new hybrid heuristic that combines Quantum Particle Swarm Optimization (QPSO) with a local search method to solve the Multidimensional Knapsack Problem (MKP). We also incorporated an MKP-specific Drop/Add repair operator within the proposed approach to guarantee the feasibility of the generated solutions and to improve their quality (if possible).

Abstract: A new variant of particle swarm optimization (PSO), named phase angle-encoded and quantum-behaved particle swarm optimization (θ -QPSO), is proposed. Six versions of θ -QPSO using different mappings are presented and compared through their application to solve continuous function optimization problems.

Phase Angle-Encoded and Quantum-Behaved Particle Swarm ...

In computational science, particle swarm optimization (PSO) is a computational method that optimizes a problem by iteratively trying to improve a candidate solution with regard to a given measure of quality. It solves a problem by having a population of candidate solutions, here dubbed particles, and moving these particles around in the search-space according to simple mathematical formulae over the particle's position and velocity. Each particle's movement is influenced by its local best known

Particle swarm optimization - Wikipedia

The 0-1 multidimensional knapsack problem is a very popular combinatorial optimization problem. We design a quantum particle swarm algorithm with diversity preserving and effective local optimization. We show the competitiveness of the proposed algorithm compared to the state-of-the-art.

Diversity-preserving quantum particle swarm optimization ...

In both science and engineering, the particle swarm optimization (PSO) algorithm is an important optimization technique that has been extensively used to find the global optima of multivariable functions. The PSO algorithm searches the variable space of a multivariable function by simulating the social behaviors of a group of animals.
