Pogil Answer Key Oxidative Phosphorylation

Oxidative phosphorylation is the term used for the attachment of free inorganic phosphate to a molecule. Identify the phases of cellular respiration that use substrate level phosphorylation and that use oxidative phosphorylation. Glycolysis and the Krebs cycle use substrate level phosphorylation, and oxidative phosphorylation uses oxidative phosphorylation.

Oxidative Phosphorylation Pogil Answer Key

oxidative phosphorilation. the body's only source of atp would be from substrate-level phosphorilation viathe breakdown of glucose. this means all atp would come from food (glucose), glucose would not be stored, and no one would store fat. because energy (atp) from substrate-phosphorilation (glucose) alone is not enough to sustain life processes.
