This timely volume offers a definitive guide to the situational judgement test (SJT), with over 250 practice questions and all the advice necessary for exam success.

The Unofficial Guide to Prescribing lays out the practical steps of how to assess, investigate and manage a patient, with a focus on what to prescribe and how to prescribe it. Its aim is to empower newly graduated junior doctors to excel at dealing with emergencies and handling complex prescribing scenarios. Prescribing errors cost healthcare systems millions annually, so early training in prescribing has become an urgent priority of medical education and now forms an essential part of teaching and assessment. The Unofficial Guide to Prescribing (from the same stable as The Unofficial Guide to Passing OSCEs) is a new book designed to address this requirement. It is written by junior doctors still close to the transition from theory to practice, overseen by a review panel of senior clinicians to ensure accuracy, and designed to help medical students practise and learn as much as possible about prescribing, in actual clinical scenarios, before they have to do it for real. Each scenario is presented as you would see it in the hospital setting and covers: Initial step-by-step assessment of the patient: how to assess, assessment findings, and immediate management Initial investigations Initial management Reassessment Treatment Handing over the patient 'Prescribe' alerts throughout Written-up drug charts Blank drug charts for copying and practice

Zero to Finals is a resource dedicated to helping students of medicine. It was created from scratch in the belief that, with better tools, you can accelerate your learning, achieve more in less time and feel more motivated along the way. The Zero to Finals books are designed to be studied from cover to cover in preparation for your exams. I have removed the waffle and focused on the key information you need for your exams. I have added helpful "Tom Tips" I have picked up during a decade of sitting medical exams, that will help you score those extra marks. The focus is on learning the concepts, vocabulary and latest guidelines so you can take the fastest route to exam success and proficiency as a new doctor.The Zero to Finals books are supplemented by the resources on the website (zerotofinals.com). There is a webpage on each topic with illustrations, diagrams, podcasts and videos that tackle the problem from every angle. You can also find carefully crafted practice questions, with feedback to help you develop your exam technique.

This is a new, first-edition book of MCQs and EMQs designed to help test understanding of content presented in the Illustrated Textbook of Paediatrics. It is ordered by the same chapter titles as Illustrated Textbook of Paediatrics for ease of reference. Features: Over 300 questions in MCQ and EMQ formats Highly illustrated 31 chapters

Designed to help medical students through their exams. Built around the successful 'Essential Revision Notes for MRCP', this title focuses on what is essential learning for medical undergraduates and gives readers an 'all round' knowledge of medicine at this level.

Drug prescribing is one of the most important parts of clinical practice. Yet it remains one of the most commonly failed components of undergraduate assessments, and accounts for an uncomfortably high proportion of medical errors. To remedy this, the Prescribing Safety Assessment (PSA) exam has been introduced in the UK. It is compulsory and will set a minimum standard for safe prescribing. Failure will preclude GMC registration. Pass the PSA is written specifically for the exam, with one chapter dedicated to each PSA section. Introduces a simple, memorable and failsafe approach to prescribing (the 'PRESCRIBER' mnemonic) Specifies the universal basic principles of prescribing for all sections. Examines each section's question structure and how to approach it. Questions (structured identically to the exam) conclude each chapter. Covers all scenarios suggested for questioning in the PSA blueprint. Common traps highlighted throughout. Two mock exams.

Crash Course – your effective every-day study companion PLUS the perfect antidote for exam stress! Save time and be assured you have the essential information you need in one place to excel on your course and achieve exam success. A winning formula now for over 20 years, each series volume has been fine-tuned and fully updated – with an improved full-colour layout tailored to make your life easier. Especially written by senior students or junior doctors – those who understand what is essential for exam success – with all information thoroughly checked and quality assured by expert Faculty Advisers, the result are books which exactly meet your needs and you know you can trust. Each chapter guides you succinctly through the full range of curriculum topics, integrating clinical considerations with the relevant basic science and avoiding unnecessary or confusing detail. A range of text boxes help you get to the hints, tips and key points you need fast! A fully revised self-assessment section matching the latest exam formats is included to check your understanding and aid exam preparation. The accompanying enhanced, downloadable eBook completes this invaluable learning package. Series volumes have been honed to meet the requirements of today's medical students, although the range of other health students and professionals who need rapid access to the essentials of obstetrics and gynaecology will also love the unique approach of Crash Course. Whether you need to get out of a fix or aim for a distinction Crash Course is for you! Provides the exam syllabus in one place - saves valuable revision time Written by senior students and recent graduates - those closest to what is essential for exam success Quality assured by leading Faculty Advisors - ensures complete accuracy of information Features the ever popular 'Hints and Tips' boxes and other useful aide-mémoires - distilled wisdom from those in the know Updated self-assessment section matching the latest exam formats – confirm your understanding and improve exam technique fast

***It was called in as a robbery at Hayek Associates, an online game company. So you can imagine Sergeant Sue Smith's mood as she watches the video footage of the heist being carried out by a band of orcs and a dragon, and realises that the robbery from an online game company is actually a robbery from an online game. Just wonderful. Like she has nothing better to do. But online entertainment is big business, and when the bodies of real people start to show up, it's clear that this is anything but a game. For Sue, computer coding expert Jack Reed, and forensic accountant Elaine Barnaby, the walls between the actual and the virtual are about to come crashing down. There is something very dangerous and very real going on at Hayek Associates, and those involved are playing for keeps. No cheats, no back doors, no extra lives - make a wrong call on this one and it's game over.***

***This public inquiry report into serious failings in healthcare that took place at the Mid Staffordshire NHS Foundation Trust builds on the first independent report published in February 2010 (ISBN 9780102964394). It further examines the suffering of patients caused by failures by the Trust: there was a failure to listen to its patients and staff or ensure correction of deficiencies. There was also a failure to tackle the insidious negative culture involving poor standards and a disengagement from managerial and leadership responsibilities. These failures are in part a consequence of allowing a focus on reaching national access targets, achieving financial balance and seeking foundation trust status at the cost of delivering acceptable care standards. Further, the checks and balances that operate within the NHS system should have prevented the serious systemic failure that developed at Mid Staffs. The system failed in its primary duty to protect patients and maintain confidence in the healthcare system. This report identifies numerous warning signs that could and should have alerted the system to problems developing at the Trust. It also sets out 290 recommendations grouped around: (i) putting the patient first; (ii) developing a set of fundamental standards, easily understood and accepted by patients; (iii) providing professionally endorsed and evidence-based means of compliance of standards that are understood and adopted by staff; (iv) ensuring openness, transparency and candour throughout system; (v) policing of these standards by the healthcare regulator; (vi) making all those who provide care for patients , properly accountable; (vii) enhancing recruitment, education, training and support of all key contributors to the provision of healthcare; (viii) developing and sharing ever improving means of measuring and understanding the performance of individual professionals, teams, units and provider organisations for the patients, the public, and other stakeholders. DVD.***

Get ahead! The Prescribing Safety Assessment is an invaluable practice aid for students preparing for final exams. Written by an experienced team of authors under the guidance of series editor Saran Shantikumar, it covers two examinations’ worth of questions matching the exact format of the Prescribing Safety Assessment (PSA). Candidates can work through the practice papers systematically or dip in and out of the book using the index as a guide to questions on a specific topic.

'I Had a Black Dog says with wit, insight, economy and complete understanding what other books take 300 pages to say. Brilliant and indispensable.' - Stephen Fry 'Finally, a book about depression that isn't a prescriptive self-help manual. Johnston's deftly expresses how lonely and isolating depression can be for sufferers. Poignant and humorous in equal measure.' Sunday Times There are many different breeds of Black Dog affecting millions of people from all walks of life. The Black Dog is an equal opportunity mongrel. It was Winston Churchill who popularized the phrase Black Dog to describe the bouts of depression he experienced for much of his life. Matthew Johnstone, a sufferer himself, has written and illustrated this moving and uplifting insight into what it is like to have a Black Dog as a companion and how he learned to tame it and bring it to heel.

PSA has achieved widespread commercial acceptance as the technology of choice for hydrogen purification, air separation and small scale air driers. However, PSA has numerous other actual and potential uses such as the recovery of methane from landfill gas, the production of carbon dioxide and other large scale applications. Since the design and optimization of a PSA process requires a somewhat mathematical model, two chapters of the book provide in-depth information on equilibrium theory and dynamic numerical simulation. However, this mathematical material will also help the general reader develop an understanding of the principles and strenghts and limitations of various approaches. PSA engineers, chemical engineers, environmental chemists, academicians and managers who must make informed decisions about purchasing costly PSA systems will find Pressure Swing Adsorption of particular value.

In a classic work of alternate history, the United States is divided up and ruled by the Axis powers after the defeat of the Allies during World War II. Reissue. Winner of the Hugo Award for Best Novel.

From 1960 until his sudden death in office in 1976, Dan Long was the most visible face of the Public Service Association (PSA), New Zealand's largest union. In his dark suit, narrow tie and plastic-framed spectacles, Long seemed the epitome of the public servants he represented. In fact, as this lively biography makes clear, his background and political attitudes made him a very unusual leader of this traditionally conservative organisation. The son of working-class migrants from Ireland, Long was raised a staunch Catholic in the remote Wairarapa railway community of Cross Creek. He and his two brothers were conscientious

objectors during WW2, and were held in a series of detention camps. Long then worked as a lawyer in the Ministry of Works, and in 1960 was selected as the PSA's general secretary (its most senior paid official) in part because of his active support for equal pay for women in the public service. He led the PSA during its transformation from a gentlemanly professional body into a large, well resourced and highly effective trade union representing every level of public employee from senior departmental managers to night cleaners. Long was also directly instrumental in broadening the range of PSA activities beyond immediate issues of pay and working conditions into the much wider fields of human rights, internationalism and the social revolution of the late 1960s and 70s. A warm-hearted and gentle family man, Long could also be a formidable negotiator, with a trained lawyer's grasp of detail. Although a lifelong Catholic and non-aligned leftist of pacifist principles, he nevertheless came to the attention of state security services. This book draws upon their unpublished files to show how public servants in this period suffered a covert purging because of their entirely legal political activities.

Essential Prescribing is a brand new text aimed at providing medical students with an easy-to-follow overview of the drugs they are most likely to encounter at medical school and as they start their medical careers. The book benefits from the same landscape format and approach as Scion's bestselling Essential Examination. Each class of drug is detailed using a common tabular format, based on the following sections: Examples, Mode of Action, Routes of Delivery, Indications, Cautions and contraindications, Interactions, Monitoring, Side-effects, Patient counselling. This consistent approach helps the reader quickly find the pertinent information for the common drugs and situations they are likely to come across, so they can become confident of prescribing the correct drugs for the patient in appropriate doses. The book also features a questions and answer section at the back for the reader to assess their knowledge. All medical students and foundation doctors now have to prove their prescribing competence by taking the recently-introduced Prescribing Safety Assessment. Essential Prescribing will not only arm the reader with the key knowledge for this assessment, but will also provide them with the core prescribing knowledge they will need as their medical careers progress.

"Psychiatry: a clinical handbook" is a comprehensive textbook, written in the easy-to-follow style of a revision guide. All the major aspects of Psychiatry are covered in a systematic and succinct manner, making the book an excellent revision tool for undergraduate examination purposes.

Fully updated for its second edition, Pass the PSA is written specifically for the Prescribing Safety Assessment (PSA) exam, with one chapter dedicated to each PSA exam section. Fully updated for its second edition, Pass the PSA is written specifically for the Prescribing Safety Assessment (PSA) exam, with one chapter dedicated to each PSA exam section. This latest edition: Introduces a simple, memorable and failsafe approach to prescribing (the 'PRESCRIBER' mnemonic). Specifies the universal basic principles of prescribing for all sections. Examines each section's question structure and how to approach it. Includes questions (structured identically to the exam) that conclude each chapter. Covers all scenarios suggested for questioning in the PSA blueprint. Highlights common traps throughout. Contains two mock exams. Includes finals-level sections on data interpretation and management.

Now in its second edition, this highly successful guide to safe prescribing of the most common classes of drugs is your starting point for safe and effective practice. The first edition was a direct response to requests from students for a compendium of the 100 most important drugs in the NHS. Research led by Professor Emma Baker identified the 'top 100 drugs' by their importance and prescribing frequency. The top 100 drugs and the five most important intravenous fluids are presented using a clear, consistent layout across double-page spreads. Drugs are arranged alphabetically and also listed by organ system and clinical indication, providing multiple pathways into the information. Clinical pharmacology is discussed under the headings: common indications; mechanisms of action; important adverse effects; warnings; and important interactions. Practical prescribing is discussed under the headings: prescription; administration; communication; monitoring; and cost. A clinical tip is presented for every drug. Single-best-answer questions are provided for self-assessment and to show how information from several drugs may be integrated.

The Social Security Administration (SSA) administers two programs that provide disability benefits: the Social Security Disability Insurance (SSDI) program and the Supplemental Security Income (SSI) program. SSDI provides disability benefits to people (under the full retirement age) who are no longer able to work because of a disabling medical condition. SSI provides income assistance for disabled, blind, and aged people who have limited income and resources regardless of their prior participation in the labor force. Both programs share a common disability determination process administered by SSA and state agencies as well as a common definition of disability for adults: "the inability to engage in any substantial gainful activity by reason of any medically determinable physical or mental impairment which can be expected to result in death or which has lasted or can be expected to last for a continuous period of not less than 12 months." Disabled workers might receive either SSDI benefits or SSI payments, or both, depending on their recent work history and current income and assets. Disabled workers might also receive benefits from other public programs such as workers' compensation, which insures against work-related illness or injuries occurring on the job, but those other programs have their own definitions and eligibility criteria. Selected Health Conditions and Likelihood of Improvement with Treatment identifies and defines the professionally accepted, standard measurements of outcomes improvement for medical conditions. This report also identifies specific, long-lasting medical conditions for adults in the categories of mental health disorders, cancers, and musculoskeletal disorders.

Specifically, these conditions are disabling for a length of time, but typically don't result in permanently disabling limitations; are responsive to treatment; and after a specific length of time of treatment, improve to the point at which the conditions are no longer disabling.

Wherever you study or practise obstetrics and gynaecology, a sound knowledge of the clinical aspects will underpin your understanding of the specialty and maximise your ability to make a difference to the care of women and babies. A perfect companion to Kumar and Clark's Clinical Medicine, this new edition continues to provide an excellent grounding and framework for handling clinical problems in obstetrics and gynaecology. Highly illustrated with clear, full-colour line drawings and colour photos. Summary boxes and tables throughout. Key-points boxes at the end of each chapter. The latest information for statistics and genetics. Forward-looking approach to obstetrics and gynaecology. History and ethics boxes throughout. Organized into three sections: Fundamentals, Gynaecology, and Pregnancy and the puerperium. New section on sexual and reproductive health New chapter on surgery to aligned with the RCOG undergrad curriculum Anaesthesia chapter totally reworked. Increased coverage of ectopic pregnancy and miscarriage. Fully revised and updated throughout.

This second new OSCE title delivers another set of up to date popular cases encountered on the wards and in the exams. OSCE Stations for Medical Finals Book 2: Scenarios is created to reflect current exam topics, each scenario is subdivided into 4 to 6 related tasks. The reader is guided through stations covering: history taking, clinical signs, data interpretation, and clinical therapeutics. By working methodically through the tasks the authors hope to promote the application and utilisation of knowledge and skills, asking candidates to think and act on the clinical information they have gathered. As the stations and tasks are linked, the candidate starts at station 1, and moves through each of the subsequent stations in the given order. Mirroring the real world, each task would be performed on the same patient.
