If you've worked through any introductory matplotlib tutorial, you've probably called something like `plt.plot([1, 2, 3])`. This one-liner hides the fact that a plot is really a hierarchy of nested Python objects. A "hierarchy" here means that there is a tree-like structure of matplotlib objects underlying each plot.

Matplotlib axis Labels and Title Text. Finally, let's remember that we'll want to reference this graph in the future, without having to dig through all the code to remember what the numbers mean. Fortunately, adding annotations it's quite easy. Let's add an X label, Y label and plot title. `ax = plt.plot() ax.set_ylim(0,1)`

Easy Python Time Series Plots with Matplotlib

Create a simple plot. `import matplotlib.pyplot as plt import numpy as np # Data for plotting t = np.arange(0.0, 2.0, 0.01) s = 1 + np.sin(2 * np.pi * t) fig, ax = plt.subplots() ax.plot(t, s) ax.set(xlabel='time (s)', ylabel='voltage (mV)', title='About as simple as it gets, folks') ax.grid() fig.savefig("test.png") plt.show()`

Matplotlib 3.3.2 documentation - Matplotlib: Python plotting

Matplotlib is one of the most popular Python packages used for data visualization. It is a cross-platform library for making 2D plots from data in arrays. It provides an object-oriented API that helps in embedding plots in applications using Python GUI toolkits such as PyQt, WxPython or Tkinter.

`plot(x, y, [fmt], *, data=None, **kwargs)` `plot(x, y, [fmt], [x2], y2, [fmt2],..., **kwargs)` The coordinates of the points or line nodes are given by x, y. The optional parameter `fmt` is a convenient way for defining basic formatting like color, marker and linestyle. It's a shortcut string notation described in the Notes section below.
