The authors offer a unique effort in presenting a unified and systematic treatment of various modeling methodologies and analysis techniques for performance evaluation of automated manufacturing systems. The text begins with an overview of automated manufacturing systems, and then provides a clear and comprehensive discussion of three principal analytical modeling paradigms: Markov chains, queues and queuing networks, and petri nets.

A unified and systematic treatment is presented of modeling methodologies and analysis

techniques for performance evaluation of automated manufacturing systems. The book is the first treatment of the mathematical modeling of manufacturing systems. Automated manufacturing systems are surveyed and three principal analytical modeling paradigms are discussed: Markov chains, queues and queueing networks, and Petri nets.

The flow of multiple concurrent jobs in an automated manufacturing system (AMS), all competing for a finite set of resources, often leads to a deadlock situation. In this paper, we develop Petri net and Markov chain models for manufacturing systems with blocking and deadlock. We compute the probability that
