In this book, the first dedicated entirely to the petrology of lamproites and their relationships to other potassium-rich rocks, the objective of the authors is to provide a comprehensive critical review of the occurrence, mineralogy, geochemistry, and petrogenesis of the clan. Although lamproites represent one of the rarest of all rock types, they are both economically and scientifically important and we believe the time is ripe for a review of the advances made in petrology over the ...

Mid-Proterozoic kimberlites and lamproites from southern India are some of the world's oldest known, small-fraction volatile-rich, silicate melts that, until recently, have remained poorly documented in the international literature.

Petrogenesis of Proterozoic Lamproites and Kimberlites ...

Petrology Lamproites form from partially melted mantle at depths exceeding 150 km. The molten material is forced surface in volcanic pipes, bringing with it xenoliths and diamonds from the harzburgitic peridotite or eclogite mantle regions where diamond formation is stabilized.

The molten material is forced surface in volcanic pipes, bringing with it xenoliths and diamonds from the harzburgitic peridotite or eclogite mantle regions where diamond formation is stabilized. Recent research, for example on the lamproites at Gausberg in Antarctica, and lead-lead isotope geochemistry have revealed that the source of lamproites may be transition zone of subducted lithosphere ...
