The purpose of the standard EN IEC 61439-2 (low-voltage switchgear and controlgear assemblies) is to harmonize as far as practicable all rules and requirements of a general nature applicable to low-voltage switchgear and controlgear assemblies (focus on power center) in order to obtain uniformity of requirements and verification for assemblies and to avoid the need for verification to other standards.

EN 61439-2: Power switchgear and controlgear assemblies

A low-voltage switchgear and controlgear assembly that is used to distribute and control electric power for all kinds of loads in industrial, commercial and similar applications in which operation by laypersons is not intended [DIN EN (IEC) 61439-2; 3.1.101].

LOW-VOLTAGE POWER SWITCHGEAR AND CONTROLGEAR ASSEMBLIES

MNS is ABB's low-voltage switchgear and controlgear assembly for power distribution and motor control. The MNS design is verified in accordance with the latest IEC standards, IEC 61439 -1/-2 and IEC TR 61641. MNS switchgear assembly is of scalable design, enabling ABB to supply integrated solutions for today's challenging business environment.

For switchgear and controlgear assemblies up to 1600 A, IEC 61439 permits verification via the determination and calculation of power losses in the operating equipment used. Successful verification requires proof that dissipation of the heat loss is guaranteed, to prevent excessively high temperatures in the enclosure interior. 22
