*Thermal and infrared imaging systems are used in a wide range of industries and applications. For example, they're used in security settings to identify intruders, surveillance applications to monitor critical infrastructure, construction to detect flaws in a building, and agriculture to track crop health, among many other applications. These types of cameras are often used outdoors to detect light outside of the visible spectrum.*

~~Practical Applications Of Infrared Thermal Sensing And ...~~

Thermal infrared imaging has been proposed, and is now used, as a tool for the non-contact and non-invasive computational assessment of human autonomic nervous activity and psychophysiological states.

~~New Frontiers for Applications of Thermal Infrared Imaging ...~~

Significance. Conventional wisdom states that the hotter an object is, the brighter it glows. This is the case for thermal light at any wavelength and enables applications such as infrared imaging and noncontact thermometry. We demonstrate a coating that emits the same amount of thermal radiation irrespective of temperature, within a temperature range of about 30 °C.
