Common Core State Standards and the Speech-Language Pathologist: Standards-Based Intervention for Special Populations is a tool for the analysis of the Common Core State Standards (CCSS) and the development of interventions to meet student-specific needs. The CCSS is an education initiative in the United States that details what K-12 students should understand in English language arts and mathematics by the end of each grade. The initiative seeks to establish consistent education standards across the United States and ensure that graduating students are prepared to enter college or the workforce. As of 2015, forty-three states had adopted the CCSS. With the implementation of the CCSS, it is critical that speech-language pathologists collaborate with educators to enable the success of students with communication disorders as well as English language learners. This text offers a practical approach for application of the CCSS with a parallel analysis of children's strengths and needs to create a template for intervention. It addresses strategies to facilitate the success of students in accessing and achieving the expectations of the general curriculum, with a focus on students with communication disorders, hearing loss, vision loss, deaf-blindness, specific learning disabilities, autism, multiple disabilities, and English language learners. Key features include: Background and implications of the CCSSChapters written by experts in the fieldTools for analysis of the language expectations of the CCSS and a framework for aligning intervention (both direct and classroom-based) with the CCSS for students at elementary and secondary levelsCollaboration strategies to facilitate success in the classroomMultiple case studies Common Core State Standards and the Speech-Language Pathologist is a must-have resource for any speech-language pathologist working with children, as well as their education and administration partners.

This text is designed to assist in the replication of a successful classroom-home language intervention program for mildly to moderately language impaired preschool children. The first portion of the manual discusses the rationale and operation of the program. Provided in the second part are sample lesson plans which provide specific examples of the integration of language remediation targets into preschool activities. After an introductory chapter, a literature review examines a pragmatic approach to language intervention in the classroom. Appended to this chapter are resources on pragmatic skills. The next chapter considers the use of space, furniture, and learning materials in the classroom and includes a checklist for arranging and equipping a classroom. Staffing and training in the preschool language classroom are discussed next and samples of school newsletters and forms for training and home visits provided. The next chapter addresses planning and scheduling of language intervention and is followed by a consideration of classroom management with guidelines for managing behavior, and a review of data collection in the classroom. Provided for each lesson plan in Part II is information on language targets, materials, and procedures. References accompany most chapters. (DB)

The Chatterbugs Manual is a practical resource for all those supporting the development of the foundation communication skills of attention and listening, turn-taking and early vocabulary in children. The Chatterbugs programme has been designed to bridge the gap between education and specialist speech, language and communication provision, specifically with Early Years mainstream settings in mind. It enables school staff to prepare children--including those with delayed communication skills, EAL learners, or children with suspected special education needs--for learning in school by developing their communication skills through the use of robust communication strategies. The Chatterbugs Manual contains:
[] An overview of the programme, including step-by-step instructions on how to plan and deliver a Chatterbugs session
[] Guidance on identifying children likely to benefit from the programme
[] Progress Tracking documents, along with information on measuring outcomes
[] Child-friendly, illustrated session resources
[] Frequently Asked Questions
[] A parent-friendly information leaflet
[] Information on models of implementation
[] Information on accessing training and support
Developed by an experienced speech and language therapist, Chatterbugs has consistently recorded successful outcomes for over 80% of participants since the programme's inception in 2012, and for over 90% of participants since 2016. With its hands-on approach, the programme is an essential resource for educators, support staff, and speech and language therapists working with Early Years children.

This module provides a programme of activities and advice designed to assist the development of speech and language skills for children with Down syndrome from birth to five years. The advice and activities are based on knowledge of the processes affecting speech and language development in typically developing children, the identified difficulties of children with Down syndrome and current research findings from studies evaluating effective remedial strategies. It also includes checklists for evaluating and recording children's development of interactive communication skills, speech sounds, vocabulary, sentences and grammar. The programme will enable parents, teachers and therapists to help children with Down syndrome to learn to talk, to talk in sentences, and to develop their speech clarity and conversational skills. It starts with activities to develop the foundation skills in infancy that lead on to talking, including the use of gesture and sign to support comprehension, and with an emphasis on speech sound work from infancy.Building a spoken vocabulary to 400 words by 5 years of age is seen as a priority, in order to develop grammar and phonology, and a recommended vocabulary programme with record sheets is included. The ways in which reading activities should be used to support all aspects of speech and language learning during preschool years are mentioned but the detailed advice on teaching early reading is in the reading module. This module follows on from Speech and language development for individuals with Down syndrome - An overview DSii-03-01] which should be read first, to provide the reader with an adequate understanding of speech and language development to be successful in using this programme.

Alex just has to convince his mom to let him have an iguana, so he puts his arguments in writing. He promises that she won't have to feed it or clean its cage or even see it if she doesn't want to. Of course Mom imagines life with a six-foot-long iguana eating them out of house and home. Alex's reassurances: It takes fifteen years for an iguana to get that big. I'll be married by then and probably living in my own house. and his mom's replies: How are you going to get a girl to marry you when you own a giant reptile? will have kids in hysterics as the negotiations go back and forth through notes. And the lively, imaginative illustrations show their polar opposite dreams of life with an iguana.

Attention and Listening in the Early Years is an innovative course designed for groups of children aged 2-4. Each group session is planned around a theme such as 'The Farm' or 'The Zoo'. The themes provide an anchor for the children to gain meaning from the listening activities, games and songs that will help them learn to sit still, not talk, look at the speaker and think about the words - all vital skills in good listening. Complete with full instructions, including lists of the equipment needed for each session and the auditory and visual objectives of each activity, the book also includes photocopiable detailed preparation plans and shorter prompt plans for use during the sessions. This seminal text provides a scholarly overview of evidence-based approaches to emergent literacy intervention as a necessary component of clinical practice in speech-language pathology. Numerous books are available on the topic of emergent literacy, yet few are developed specifically for the speech-language pathologist. The scope of this book is comprehensive yet focused: it is tailored to identify state-of-the-art approaches on a range of topics in the area of emergent literacy, yet focuses its emphasis on children from toddlerhood to kindergarten. This period corresponds to the emergent literacy years, which precedes children ' s transition to beginning reading. Each chapter provides scientifically cited background information relevant to the content of the chapter before discussing the "How To" and the "Why." Figures, tables, and charts throughout the text are easily accessible to the busy practicing clinician. By providing a usable integration of theory and research, it encourages readers to think about building early foundations in literacy to promote healthy early development, and emphasizes the specific approaches speech-language pathologists need to employ when targeting literacy in childhood intervention. Designed for speech-language pathologists at both pre-professional and post-graduate levels, the book will also be of value to reading specialists, literacy coaches, special educators, preschool and kindergarten teachers, and others.
