Activity-based costing is a costing method that identifies activities in an organization and assigns the cost of each activity to all products and services according to the actual consumption by each. This model assigns more indirect costs into direct costs compared to conventional costing. CIMA, the Chartered Institute of Management Accountants, defines ABC as an approach to the costing and monitoring of activities which involves tracing resource consumption and costing final outputs. Resources

Activity-based costing - Wikipedia

Definition. A variant of cost-plus pricing that takes into account the specific resources required to make a product. Instead of charging an arbitrary fee to cover fixed expenses, a business would calculate the cost of labor, buildings, administration, and other inputs. This type of pricing is more difficult to calculate than simple cost-plus pricing.

What is Activity-based Pricing? definition and meaning

Managers can more accurately analyse product profitability by combining activity-based cost data with price information. This can result in the re-pricing or elimination of unprofitable products. This information also is used to accurately estimate new product costs. By understanding cost drivers managers can design new products more efficiently.

Activity Based Management

Revenue Management is one of the most powerful levers for driving profitable growth. The most successful companies shape consumer behavior through effective merchandising choices, flawless store execution, and designing the right price and promotional strategies to maximize margin growth. The key to unlocking the potential is a detailed understanding of how value is created and human experiences are shaped in the marketplace.
