**Rotation.** The Principal Components Input File dialog appears. Select an input file and perform optional spatial and spectral subsetting, then click OK. The Enter Statistics Filename dialog appears with all of the existing statistics files in the current input data directory listed.

**Principal Components Analysis - Harris Geospatial**  
Principal component analysis transforms a multiband image to remove correlation among the bands. The information in the output image is mainly concentrated in the first few bands. By enhancing the first few bands, more details can be seen in the image when it is displayed in ArcMap. This could be helpful for collecting training
