(PDF) Propellantless Propulsion by Electromagnetic Inertia

One of the challenges to create the Space Drive being to discover a self-contained means of propulsion that requires no propellant, it was already shown that a solution to the problem does exist, provided the system is endowed with tensor mass properties. It is found that under the assumption of Minkowski's Energy-Momentum tensor being the right one (Abraham-Minkowski controversy), the ...

Propellantless Propulsion by Electromagnetic Inertia

And as he discovered in the autumn of 1989, if you accepted Einstein's view that inertia was inextricably linked to gravity, it opened up the possibility for propellantless propulsion.

Gravity, Gizmos, and a Grand Theory of Interstellar Travel

Experiments performed by independent research teams, suggesting that "propellantless" propulsion without external assistance is being achieved by means of electromagnetic inertia manipulation, are discussed here and compared within the framework of competing theoretical formulations. The authors' theory relies upon the fact that the

Overview of Theories and Experiments on Electromagnetic

Most famous propellantless methods are the gravity assist maneuver or gravitational slingshot of a spacecraft accelerating at the expense of the momentum of the planet it orbits, through the gravitational field, or beam-powered propulsion using the radiation pressure of electromagnetic waves from a distant source like a laser.

Propellantless Propulsion By Electromagnetic Inertia

Quantized inertia, previously known as the acronym MIHSC, is a controversial theory of inertia. The concept was first proposed in 2007 by physicist Mike McCulloch, a lecturer in geomatics at the University of Plymouth, as an alternative to general relativity and the mainstream Lambda-CDM model. According to McCulloch, quantized inertia would also be able to explain various anomalous effects such as the Pioneer and flyby anomalies, as well as controversial propellantless propulsion experiments so

The Truth Is The Military Has Been Researching "Anti"

Field modification approaches to propellantless propulsion include apparent reductions in gravitational mass or inertial mass. U.S. Pat. No. 3,626,605 to Wallace discloses a method and apparatus for generating a time-variant non-electromagnetic force field due to the relative motion of moving bodies constituted of elements whose nuclei have half integral "spin" values, with said force field exhibiting itself in the form of an induced secondary gravitational force.

Okay, so that's a more reasonable/acceptable answer: "We simply don't know yet." But then the corollary to this is that we can't definitively rule out the ability to do propellant-less propulsion, since we don't know yet what causes inertia.

Propellantless Field Propulsion and application

ASPS, which in Italian means "Association for Space Propulsion Development", in 1992 invented an electromagnetic propellantless thruster called PNN that can revolutionize space exploration. After more than 20 years of experimentation, the engine is close to its practical application.
